## Features:

- **Compliance with SATA Revision 3.1**
  - SATA 6.0 Gbps interface
  - Backward compatible with SATA 1.5/3.0 Gbps interfaces
  - ATA command set
- **Capacities**
  - 16, 32, 64, 128, 256 GB
- **Performance\***
  - Interface burst read/write: 600 MB/sec
  - Sustained read: up to 520 MB/sec
  - Sustained write: up to 185 MB/sec
- **Flash Management**
  - Built-in hardware ECC
  - Wear leveling
  - Bad block management
  - S.M.A.R.T.
  - Power Failure Management
  - TRIM
- **NAND Flash Type: MLC**
- **Endurance**
  - 16GB: 27 TBW
  - 32GB: 54 TBW
  - 64GB: 108 TBW
  - 128GB: 217 TBW
  - 256 GB: 434 TBW
- **Temperature ranges**
  - Operating:
    - Standard: 0°C to 70°C
    - Extended: -40°C to 85°C
  - Storage: -40°C to 85°C
- **Supply voltage**
  - 3.3 V  $\pm$  5%
- **Power consumption (typical)\***
  - Active mode: 485 mA
  - Idle mode: 95 mA
- **Form factor**
  - JEDEC MO-300
  - Dimensions (50.80 x 29.85 x 1.00, unit: mm)
- **Connector**
  - 52-pin mSATA signal connector
- **RoHS compliant**
- **Device Sleep (optional)**

\*Varies from capacities. The values addressed here are typical and may vary depending on host system settings.

# 1. Product Description

## 1.1 Introduction

Apacer's mSATA H1-M delivers all the advantages of flash disk technology with the Serial ATA 6.0 Gbps interface and is fully compliant with the standard mSATA form factor, known as JEDEC MO-300 standard. The module is designed to operate at optimal efficiency and reliability. Its performance can reach up to 520 MB/s read and up to 185MB/s write. Meanwhile, the power consumption of the mSATA module is much lower than traditional hard drives.

## 1.2 Capacity Specification

**Table 1-1** Capacity specification

Capacity	Total Bytes	Cylinders	Heads	Sectors	Max LBA
16 GB	16,013,942,784	16,383	16	63	31,277,232
32 GB	32,017,047,552	16,383	16	63	62,533,296
64 GB	64,023,257,088	16,383	16	63	125,045,424
128 GB	128,035,676,160	16,383	16	63	250,069,680
256 GB	256,060,514,304	16383	16	63	500,118,192

\*Display of total bytes varies from file systems.

\*\*Cylinders, heads or sectors are not applicable for these capacities. Only LBA addressing applies.

LBA count addressed in the table above indicates total user storage capacity and will remain the same throughout the lifespan of the device. However, the total usable capacity of the SSD is most likely to be less than the total physical capacity because a small portion of the capacity is reserved for device maintenance usages.

## 1.3 Performance

Performance of mSATA H1-M is shown in Table 1-2.

**Table 1-2** Performance specification

Capacity Performance	16 GB	32 GB	64 GB	128 GB	256 GB
<b>Sustained Read (MB/s)</b>	315	520	520	525	520
<b>Sustained Write (MB/s)</b>	150	180	185	175	170

Note: Performance varies from flash configurations or host system settings.

## 1.4 Pin Assignments

Pin assignment of the mSATA H1-M is shown in Figure 1-2 and described in Table 1-3.

**Figure 1-2** Apacer mSATA H1-M pin assignment

**Table 1-3** Pin Assignment Description

Pin #	mSATA Pin	Description
1	NC	No Connect
2	+3.3V	3.3V Source
3	NC	No Connect
4	DGND	Digital GND
5	NC	No Connect
6	NC	No Connect

## 2. Software Interface

### 2.1 Command Set

Table 2-1 summarizes the ATA commands supported by mSATA H1-M.

Table 2-1: Command set

Code	Command	Code	Command
E5h	Check power mode	F6h	Security Disable Password
06h	Data Set management	F3h	Security Erase Prepare
B1H	DCO	F4h	Security Erase Unit
92h	Download Microcode PIO	F5h	Security Freeze Lock
93h	Download Microcode DMA	F1h	Security Set Password
90h	Execute drive diagnostic	F2h	Security Unlock
E7h	Flush cache	70h	Seek
Eah	Flush cache Ext	Efh	Set features
Ech	Identify device	F9h	Set Max Address
E3h	Idle	37h	Set Max Address Ext
E1h	Idle immediate	C6h	Set multiple mode
91h	Initialize drive parameters	E6h	Sleep
E4h	Read buffer	B0h	Smart
C9h	Read DMA (w/o retry)	E2h	Standby
C8h	Read DMA (w/retry)	E0h	Standby immediate
25h	Read DMA Ext	E8h	Write buffer
60h	Read FPDMA QUEUED	CBh	Write DMA (w/o retry)
2Fh	Read Log Ext	Cah	Write DMA (w/retry)
C4h	Read multiple	35h	Write DMA Ext
29h	Read multiple Ext	3Dh	Write DMA FUA Ext
F8h	Read native max address	61h	Write FPDMA QUEUED
27h	Read native max Ext	3Fh	Write Log Ext
21h	Read sector(s) (w/o retry)	C5h	Write multiple
20h	Read sector(s) (w/retry)	39h	Write multiple Ext
24h	Read sector(s) Ext	Ceh	Write multiple FUA Ext
42h	Read Verify Ext	31h	Write sector(s) (w/o retry)
41h	Read verify sector(s) (w/o retry)	30h	Write sector(s) (w/retry)
40h	Read verify sector(s) (w/retry)	34h	Write sector(s) Ext
10h	Recalibrate	45h	Write uncorrectable

Note. Security command will only be workable when device runs in non-OPAL compliant mode.

### 2.2 S.M.A.R.T.

SMART, an acronym for Self-Monitoring, Analysis and Reporting Technology, is an open standard that allows a hard disk drive to automatically detect its health and report potential failures. When a failure is recorded by SMART, users can choose to replace the drive to prevent unexpected outage or data loss. Moreover, SMART can inform users of impending failures while there is still time to perform proactive actions, such as copy data to another device.

---

## 3. Flash Management

### 3.1 Error Correction/Detection

---

Flash memory cells will deteriorate with use, which might generate random bit errors in the stored data. Thus, this mSATA SSD module applies the BCH ECC Algorithm, which can detect and correct errors occur during Read process, ensure data been read correctly, as well as protect data from corruption. This device can correct up to 72bit/1K data.

### 3.2 Bad Block Management

---

Bad blocks are blocks that include one or more invalid bits, and their reliability is not guaranteed. Blocks that are identified and marked as bad by the manufacturer are referred to as “Initial Bad Blocks”. Bad blocks that are developed during the lifespan of the flash are named “Later Bad Blocks”. Apacer implements an efficient bad block management algorithm to detect the factory-produced bad blocks and manages any bad blocks that appear with use. This practice further prevents data being stored into bad blocks and improves the data reliability.

### 3.3 Wear Leveling

---

NAND Flash devices can only undergo a limited number of program/erase cycles, and in most cases, the flash media are not used evenly. If some areas get updated more frequently than others, the lifetime of the device would be reduced significantly. Thus, Wear Leveling technique is applied to extend the lifespan of NAND Flash by evenly distributing write and erase cycles across the media.

Apacer provides advanced Wear Leveling algorithm, which can efficiently spread out the flash usage through the whole flash media area. Moreover, by implementing both dynamic and static Wear Leveling algorithms, the life expectancy of the NAND Flash is greatly improved.

### 3.4 Power Failure Management

---

Power Failure Management plays a crucial role when experiencing unstable power supply. Power disruption may occur when users are storing data into the SSD. In this urgent situation, the controller would run multiple flush cycles to store the metadata for later block rebuilding. This urgent operation requires about several milliseconds to get it done. At the next power up, the firmware will perform a status tracking to retrieve the mapping table and resume previously programmed NAND blocks to check if there is any incompleteness of transmission.

### 3.5 TRIM

---

TRIM is a feature which helps improve the read/write performance and speed of solid-state drives (SSD). Unlike hard disk drives (HDD), SSDs are not able to overwrite existing data, so the available space gradually becomes smaller with each use. With the TRIM command, the operating system can inform the SSD which blocks of data are no longer in use and can be removed permanently. Thus, the SSD will perform the erase action, which prevents unused data from occupying blocks all the time.

---

### 3.6 Secure Erase

---

Secure Erase is a standard ATA command and will write all "0xFF" to fully wipe all the data on hard drives and SSDs. When this command is issued, the SSD controller will empty its storage blocks and return to its factory default settings.

Note. Secure erase command belongs to ATA security command.

## 4. Environment Specifications

### 4.1 Environmental

**Table 4-1** mSATA H1-M environmental specifications

Environment	Specification
Temperature	0°C to 70°C (Operating)
	-40°C to 85°C (Extended)
	-40°C to 85°C (in storage)
Humidity	RH 90% under 40°C
Shock	1500G, 0.5ms
Vibration	20Hz~80Hz/1.52mm (frequency/displacement)
	80Hz~2000Hz/20G (frequency/displacement)
	X, Y, Z axis/60mins each
Drop	80cm free fall, 6 face of each
Bending	≥20N, hold 1min/5times
Torque	0.5N-m or 5deg, hold 5min/5times
ESD	Pass

Note: Shock and Vibration specifications are subject to change without notice.

### 4.2 Mean Time Between Failures (MTBF)

MTBF, an acronym for Mean Time Between Failures, is a measure of a device's reliability. Its value represents the average time between a repair and the next failure. The measure is typically in units of hours. The higher the MTBF value, the higher the reliability of the device. The predicted result of this mSATA device is higher than 1,000,000 hours.

### 4.3 Certification and Compliance

mSATA H1-M complies with the following standards:

- SATA Revision 3.0
- RoHS
- ATA/ATAPI
- FCC
- CE
- BSMI

---

## 4.4 Endurance

---

The endurance of a storage device is predicted by TeraBytes Written based on several factors related to usage, such as the amount of data written into the drive, block management conditions, and daily workload for the drive. Thus, key factors, such as Write Amplifications and the number of P/E cycles, can influence the lifespan of the drive.

Capacity	TeraBytes Written
16 GB	27
32 GB	54
64 GB	108
128 GB	217
256 GB	434

Notes:

- The measurement assumes the data written to the SSD for test is under a typical and constant rate.
- The measurement follows the standard metric: 1 TB (Terabyte) = 1000 GB.

---

## 5. Electrical Characteristics

### 5.1 Operating Voltage

---

Table 5-1 lists the supply voltage for mSATA H1-M.

**Table 5-1** mSATA H1-M operating voltage

Parameter	Conditions
Supply voltage	3.3V $\pm$ 5%

### 5.2 Power Consumption

---

**Table 5-2** Power consumption (typical)

Mode \ Capacity	16 GB	32 GB	64 GB	128 GB	256 GB
Active (mA)	325	415	440	460	485
Idle (mA)	95	95	95	95	95

Note: Power consumptions may vary depending on host system settings.

## 6. Mechanical Specifications

### 6.1 Dimensions

Unit: mm  
 Tolerance:  $\pm 0.2$

## 7. Product Ordering Information

### 7.1 Product Code Designation

---

## 7.2 Valid Combination

---

### 7.2.1 Operating Temperature (0°C ~ 70°C)

Capacity	No DEVSLP	DEVSLP
16GB	APSDM016GM1HN-1TM	APSDM016GM1HN-2TM
32GB	APSDM032GM1HN-1TM	APSDM032GM1HN-2TM
64GB	APSDM064GM1HN-1TM	APSDM064GM1HN-2TM
128GB	APSDM128GM1HN-1TM	APSDM128GM1HN-2TM
256GB	APSDM256GM1HN-1TM	APSDM256GM1HN-2TM

### 7.2.2 Operating Temperature (-40°C ~ 85°C)

Capacity	No DEVSLP	DEVSLP
16GB	APSDM016GM1HN-1TMW	APSDM016GM1HN-2TMW
32GB	APSDM032GM1HN-1TMW	APSDM032GM1HN-2TMW
64GB	APSDM064GM1HN-1TMW	APSDM064GM1HN-2TMW
128GB	APSDM128GM1HN-1TMW	APSDM128GM1HN-2TMW
256GB	APSDM256GM1HN-1TMW	APSDM256GM1HN-2TMW

**Note:** Please consult with Apacer sales representatives for availabilities.

## Revision History

Revision	Description	Date
1.0	Official release	09/04/2014
1.1	Revised temperature specifications	09/26/2014
1.2	Revised Serial ATA spec support : 3.0 -> 3.1	11/07/2014
1.3	Added endurance information	11/20/2014

---
