Brightness

Light Sensors

Light Sensor

Making us more comfortable with energy efficient devices...Environmentally friendly, cadmium-free

Product name	Peak sensitivity wave length	Characteristics
Light Sensor NaPiCa  Through-hole type	580nm	<ul style="list-style-type: none"> Cadmium-free Built-in optical filter for spectral response similar to that of the human eye. Photocurrent is proportional to illumination. (linear output)

Motion

Motion Sensors

Motion Sensor

Motion sensors that always detect your slightest movement

Product name	Detection method	Type	Characteristics
MA Motion Sensor    Thin short type (V type) Short type (H type) Middle type (H type)	Detecting the presence of the human body (or another object) by the reflected beam of LED light from the sensor itself.	Built-in oscillation circuit type Detection distance 5 cm to 200 cm 1.969 inch to 78.74 inch	<ul style="list-style-type: none"> The sensors are ready for immediate use by simply connecting to a DC power supply. The built-in oscillation circuit removes the need to input a start signal. Can be used with a number of different supply voltages. <ol style="list-style-type: none"> 5 V.DC type (4.5 V.DC to 5.5 V.DC) Free-ranging type (5.5 V.DC to 27 V.DC)
  Long type (H type) Long type (V type)		External trigger type Detection distance 5 cm to 200 cm 1.969 inch to 78.74 inch	

Infrared Array Sensors

High Precision Infrared Array Sensor based on Advanced MEMS Technology

Product name	Detection method	Type	Characteristics
Grid-EYE 	Detecting the heat (infrared rays) of the human body and other objects. 	Operating voltage 3.3 V.DC 5.0 V.DC Amplification factor High gain Low gain	<ul style="list-style-type: none"> ● Temperature detection achieved on a two dimensional area with 8 x 8 (64) pixels. ● Digital output ● Miniature SMD package

Pressure Sensors

A wide range of rated pressure, including minute pressures

Product name	Pressure medium	Type (*Without glass base type)	Terminal direction	Pressure inlet hole length	Characteristics
PS-A Pressure Sensor 	Air	Rated pressure ±100, -100, 25, 50, 100, 200, 500, 1,000 *40kPa	Opposite the pressure inlet direction 	 	<ul style="list-style-type: none"> ● Compact pressure sensor with built-in amplification and temperature compensation circuit
		<Low pressure type> 6kPa	(SMD terminal) 	 	
PS Pressure Sensor PF Pressure Sensor 	Air	Rated pressure 4.9, 34.3, 49.0, 98.1, 196.1, 343.2, 490.3, 833.6, 980.7 kPa	Opposite the pressure inlet direction  (SMD terminal)	—	<ul style="list-style-type: none"> ● Ultra-miniature Base area 7.2 (W) x 7.2 (D) mm .283 (W) x .283 (D) inch ● A wide range of rated pressure, including a minute pressure.
		Bridge resistance 5kΩ	Pressure inlet direction 		
		*40kPa 98.1, 980.7kPa (PS only)	3.3kΩ		

High-precision MEMS 2-axis acceleration sensor GS2 SENSOR

Features

- High precision, high reliability : offset temperature characteristics ± 38 mg (Typ.)
- High sensitivity : 1 to 1.333 V/g(5 V.DC)
- Line-up for various operating power supply voltages and acceleration detection ranges.
- RoHS compliant

Typical Applications

- Car Electronics : Car navigation systems, Car security, Drive recorders
- Ships and special vehicles : Marine equipment, construction/agricultural machines and welfare vehicles
- Other : Theft prevention for faculty equipment, Measuring devices (levels, measuring instruments)

Recommended Circuit Diagram

The frequency characteristics value can be changed depending on the C2 and C3 capacitance value.
-3dB bandwidth is expressed in the formula below.

$$f_{-3dB} = \frac{1}{2\pi \times (100 \text{ k}\Omega) \times (C2 \text{ or } C3)}$$

Packing Format (Tape And Reel)

Tape dimensions

Dimensions of tape reel

unit : mm inch

NOTES

■ Before use, carefully check the performance and quality under actual use conditions to enhance stability.

■ Mounting

- Use the land of the printed-circuit board on which the sensor is securely fixed.
- A large noise on the power supply may cause malfunction. Place the recommended capacitor near the sensor (within 20 mm 0.787 inch of the wiring pattern length) between sensor input terminals (VDD-GND) to secure power superimposed noise resistance. Test with the actual machine and re-select the capacitor with optimal capacitance.
- Prevent the metal part of other electronic components from contacting with the sensor body as the upper face (where part numbers are imprinted) of the sensor is GND.

■ Soldering

- When soldering, avoid the external thermal influence. Heat deformation may damage the sensor or deteriorate its performance.
 - Use the non-corrosive rosin flux.
 - 1) Manual soldering
 - Raise the temperature of the soldering tip between 350 and 400 °C 662 and 752 °F (30 and 60W) and solder within 3 seconds.
 - The sensor output may vary if the load is applied on the terminal during soldering.
 - Keep the soldering tip clean.
 - 2) Reflow soldering

Below are recommended temperature profiles/conditions of reflow.

 - When printing cream solder, the screen printing method is recommended.
 - For the foot pattern, see the recommended diagram of the printed-circuit board.
 - Carefully align the terminal with the pattern as self-alignment may not be reliable.
 - The temperature of the profile is the value measured near the terminal on the printed-circuit board.
 - After reflowing, when performing reflow soldering on the back surface of the circuit board, use an adhesive to fix the board.
 - 3) Rework soldering
 - Complete rework at a time.
 - Use a flattened soldering tip when performing rework on the solder bridge. Do not add the flux.
 - Keep the soldering tip below the temperature described in the specifications.
 - 4) After soldering, do not apply stress on the soldered part when cutting or bending the circuit board.
 - 5) Prevent human hands or metal pieces from contacting with the sensor terminal. Such contact may cause anomalous outputs as the terminal is exposed to the atmosphere.
 - 6) After soldering, prevent chemical agents from adhering to the sensor when applying coating to avoid insulation deterioration of the circuit board.
3. Maximum applied pressure
The maximum pressure that can be applied to the pressure sensor, after which, when the pressure is returned to below the rated pressure range, the specifications of the pressure sensor are guaranteed.

■ Wire connection

- Correctly wire as in the connection diagram. Reverse connection may damage the product and degrade the performance.
- Do not connect wires with NC terminals. Such connection may damage the sensor.

■ Cleaning

Avoid ultrasonic cleaning as this may cause disconnection of the wire.

■ Environment

- Avoid use and storage in the corrosive gas (organic solvent, sulfurous acid and hydrogen sulfide gases) which negatively affects the product.
- When installing the sensor, also install the capacitor as in the connection diagram.
- Use surge absorbers as applying the external surge voltage may damage the internal circuit.
- Malfunction may occur near electric noises from static electricity, lightning, broadcast or amateur radio stations and mobile phones.
- Avoid use in a place where these products come in contact with water.
- Avoid use in an environment where these products cause dew condensation. When water attached to the sensor chip freezes, the sensor output may be fluctuated or damaged.
- Do not apply high-frequency oscillation, such as ultrasonic waves, to the product.

■ Other precautions

- These specifications are for individual components. Before use, carefully check the performance and quality under actual use conditions to enhance stability.
- Once the individual sensor is dropped, do not use. Drop may cause functional disorders.
 - Misconnection and the wrong acceleration sensing range may invite the risk of accidents.
 - Ensure that using acceleration is within the rated range. Use beyond the range may damage the product.
 - Follow the instructions below as static electricity may damage the product.
 - (1) For storage and transportation, avoid plastic containers which are easily electrified.
 - (2) When storing and transporting the sensor, choose the environment where static electricity is hardly generated (e.g., humidity between 45 and 60 %) and protect the product by using electroconductive packaging materials.
 - (3) Once unpacked, perform antistatic countermeasures.
 - Operators handling sensors must wear antistatic cloths and human body grounding devices.
 - Cover the surface of workbench by electroconductive plates and ground measuring instruments and jigs.
 - Use the soldering iron which has a small leakage current or ground the soldering tip.
 - Ground the assembling equipment.

- (4) Use surge absorbers as applying the external surge voltage may damage the internal circuit.
(surge resistance: power supply voltage as in the absolute maximum rating)

■ Special notes

We exert maximum efforts for quality control of the product, Please mind also about the following.

- 1) To prevent occurrence of unexpected circumstances, please inform us of the specifications of your product, customers, use conditions and details of the attachment position.
- 2) Have sufficient margin values of driving/performance guarantee described in the specifications and apply safety measures with double circuits, if serious effects on human lives or property are predicted due to a quality failure of the product. Those countermeasures are also for the product liability.
- 3) A warranty period is one year after the delivery to your company. Quality assurance is limited to the items and the scopes described in the specifications. If a defect is found after the delivery, we will promptly provide a replacement or change/repair the defect part at the place of delivery in good faith. Exceptions are below.
 - Damages by a failure or a defect which arose after the delivery.
 - After the delivery, when storing and transporting, if conditions other than conditions in the specifications are applied to the product.
 - Damages by unforeseen phenomenon which cannot be predicted with the technologies available at the time of delivery.
 - Damages by natural and anthropogenic disasters, such as earthquake, flood, fire and war, which are beyond our reasonable control.

High-precision MEMS 1-axis acceleration sensor GS1 SENSOR

↔: Direction of acceleration detection

Features

- High precision, high reliability : Offset temperature characteristics ± 47 mg (Typ.)
- High sensitivity : 1 to 1.333 V/g (5 V.DC)
- RoHS compliant

Typical Applications

- Car navigation systems
- Projectors (trapezoidal distortion correction)
- Elevators, welfare equipment (inclination detection)

Electrostatic capacitance detection sensor 1-axis acceleration sensor

GF1

Features

- High precision, High reliability : Superior offset voltage temperature characteristics (± 33 mg (Typ.))
- High sensitivity : 1.333 to 3.0 V/g
- Compact size : 58×36.5×33 mm 2.283×1.437×1.299 inch (Direct-mount type)
- RoHS compliant

Typical Applications

- Automobiles : 4WD-ABS control, neutral control, idling stop system and suspension control
- Special vehicles : Inclination detection (for enhanced safety and operating efficiency) of agricultural machine, construction machine and welfare vehicles
- Photovoltaic generation : Sun tracking panels

Wiring Diagram

NOTES

■ Before using the products, carefully check the quality under actual use conditions to enhance stability.

■ Wire connection

Correctly wire as in the connection diagram. Reverse connection may damage the product and degrade the performance.

■ Cleaning

Avoid ultrasonic cleaning as this may cause disconnection of the wire.

■ Environment

- Avoid use and storage in the corrosive gas (organic solvent, sulfurous acid and hydrogen sulfide gases) which negatively affects the product.
- Use surge absorbers as applying the external surge voltage may damage the internal circuit.
- Malfunction may occur near electric noises from static electricity, lightning, broadcast or amateur radio stations and mobile phones.
- Avoid use in an environment where these products cause dew condensation. When water attached to the sensor chip freezes, the sensor output may be fluctuated or damaged.
- Do not apply high-frequency oscillation, such as ultrasonic waves, to the product.
- Do not use in direct sunlight or other comparable light.

■ Other precautions

These specifications are for individual components. Before use, carefully check the performance and quality under actual use conditions to enhance stability.

- Misconnection and the wrong range of acceleration detection may invite the risk of accidents.
- Avoid use beyond the specified acceleration range, as such use may damage the product.
- Carefully handle as static electricity may damage the product.

■ Special notes

We exert maximum efforts for quality control of the product, Please mind also about the following.

- 1) To prevent occurrence of unexpected circumstances, please inform us of the specifications of your product, customers, use conditions and details of the attachment position.
- 2) Have sufficient margin values of driving/performance guarantee described in the specifications and apply safety measures with double circuits, if serious effects on human lives or property are predicted due to a quality failure of the product. Those countermeasures are also for the product liability.
- 3) A warranty period is one year after the delivery to your company. Quality assurance is limited to the items and the scopes described in the specifications.

If a defect is found after the delivery, we will promptly provide a replacement or change/repair the defect part at the place of delivery in good faith. Exceptions are below.

- Damages by a failure or a defect which arose after the delivery.
- After the delivery, when storing and transporting, if conditions other than conditions in the specifications are applied to the product.
- Damages by unforeseen phenomenon which cannot be predicted with the technologies available at the time of delivery.
- Damages by natural and anthropogenic disasters, such as earthquake, flood, fire and war, which are beyond our reasonable control.

Photo IC type high sensitive light sensor NaPiCa

Through-hole type

Features

- Built-in optical filter : visibility characteristics close to human visibility
- Linear photocurrent output proportionating to the brightness of surrounding environment
- Environmentally-friendly silicon chip
- RoHS compliant

Typical Applications

- Automatic lighting of lighting apparatus (domestic lighting, security light)
- Day and night power saving operation of domestic appliances
- Brightness detection of wall clocks (radio clocks)

Types

Standard packing : Tape and reel package Through-hole type : Carton : 2,000 pcs.; Case: 2,000 pcs.
Baggage package Through-hole type : Carton : 500 pcs.; Case: 1,000 pcs.

Type (shape)	Photocurrent	Part No.	
		Tape and reel package	Baggage package
Through-hole type	260 μ A*	AMS302T	AMS302

Note: *Ev = 100 lx (Ev : Brightness, Fluorescent lamp is used as light source)

Ratings

- Absolute maximum ratings (Measuring condition: ambient temperature: 25 °C 77 °F)

Item	Symbol	Absolute maximum ratings	Remarks
Reverse voltage	V_R	-0.5 V.DC to 8 V.DC	-
Photocurrent	I_L	5 mA	-
Power dissipation	P	40 mW	-
Operating temperature	T_{opr}	-30 °C to 85 °C -22 °F to +185 °F	Non-condensing at low temperatures
Storage temperature	T_{stg}	-40 °C to 100 °C -40 °F to +212 °F	Non-condensing at low temperatures

- Recommended operating condition

Item	Symbol	AMS302	Remarks
Reverse voltage	Minimum	1.5 V.DC	-
	Maximum	6 V.DC	-

- Electrical and optical characteristics (Measuring condition: ambient temperature: 25 °C 77 °F)

Item		Symbol	AMS302	Condition
Peak sensitivity wavelength	—	λ_p	580 nm	—
Photocurrent 1	Minimum	I_{L1}	9.1 μA	$V_R=5 \text{ V.DC}, E_v=5 \text{ lx}^{*1}$
	Typical		13 μA	
	Maximum		16.9 μA	
Photocurrent 2	Minimum	I_{L2}	182 μA	$V_R=5 \text{ V.DC}, E_v=100 \text{ lx}^{*2}$
	Typical		260 μA	
	Maximum		338 μA	
Photocurrent 3	Typical	I_{L3}	500 μA	$V_R=5 \text{ V.DC}, E_v=100 \text{ lx}^{*2}$
Dark current	Maximum	I_D	0.3 μA	$V_R=5 \text{ V.DC}, E_v=0 \text{ lx}$
Switching time	Rise time	Typical	t_r	$V_{CC}=5.0 \text{ V.DC}, V_0=2.5 \text{ V.DC}, R_L=5 \text{ k}\Omega$
	Fall time	Typical	t_f	

Note : *1 Fluorescent lamp is used as light source. E_v = Brightness
 *2 CIE standard illuminant 'A' is used as light source.

unit : mm inch

Safety Precautions

Follow the instructions to prevent injuries and accidents.

- Avoid use beyond the specifications.
 Such use may generate abnormal heat, smoke and fire.

- Correctly connect terminals according to the pin arrangement in the specifications. Misconnection may invite unexpected malfunction, abnormal heat, smoke and fire.
- For safety-sensitive use, arrange appropriate protective circuits and protection devices.

CAUTIONS FOR USE

■ Applying stress beyond absolute maximum rating

When voltage and current values of each terminal exceed absolute maximum rating, overvoltage and overcurrent may deteriorate the internal element. In extreme cases, such excess may melt wires or damage the silicon P/N junction. Design the product not to exceed the absolute maximum rating even momentarily.

■ Deterioration and damage by static electricity discharge

The phenomenon, deteriorating the internal element, is generally called electrostatic breakdown. It is caused by discharge of static electricity, arisen from multiple factors, to each terminal. Once unpacked, perform antistatic countermeasures and follow the instructions below.

- 1) Operators must wear antistatic cloths and human body grounding devices, and have the protective resistance of between 500 k Ω and 1 M Ω .
- 2) Cover the surface of workbench by electroconductive metal plates and ground measuring instruments and jigs.
- 3) Use the soldering iron which has a small leakage current or ground the soldering tip. (The soldering iron for a low voltage is recommended)
- 4) Ground the assembling equipment.
- 5) When packing printed-circuit boards and devices, avoid polymeric materials, which have electrification characteristics, such as expanded polystyrene and plastic.
- 6) When storing and transporting the sensor, choose the environment where static electricity is hardly generated (e.g., humidity between 45 and 60 %) and protect the product by using electroconductive packaging materials.

■ When the power is supplied, the current flowing into the sensor varies in order to stabilize the internal circuit.

■ Storage

The sensor is in the transparent resin package. Due to its sensitivity to humidity, the package is moisture-proof. When storing the sensor, follow the instructions below.

- 1) Promptly use after opening. (within a week, below 30 °C 86 °F/60 % R.H.)
- 2) Once unpacked, preserving in a moisture-proof manner, such as keeping in a moisture-proof bag with silica gels, is recommended for long-term storage. (use within 3 months)
- 3) Extremely bad storage conditions may deteriorate solderability or characteristics, and defect the appearance. Recommended conditions of the storage place are below.
 - Temperature : 0 to 30 °C 32 to 86 °F
 - Humidity : Below 60% R.H. (Avoid freezing and dew condensation)
 - Atmosphere: Low-dust and free from noxious chemicals such as sulfurous acid gas

* During soldering, when adding thermal stress in a moisture absorbing state, moisture evaporates, swells and generates stress to the internal package. To avoid swellings and cracks in the surface of the package, follow soldering conditions below.

■ Recommended soldering conditions

<Through-hole type>

1) Recommended conditions

(1) Double-wave soldering method

(2) Soldering method

Tip temperature : 350 to 400 °C 662 to 752 °F
 Wattage : 30 to 60 W
 Soldering time : Less than 3 sec.

- 2) Keep the soldering part at a distance of 3 mm 0.118 inch or more from the root of the lead.

■ Mounting

- 1) When various packages are on one circuit board, temperature rise of the lead largely depends on the package size. Keep temperature of the soldered terminals of the products below the previously mentioned specifications. Before use, check the performance with actual equipment.
- 2) If mounting conditions are beyond the specifications above, such use may decrease the resin strength, increase mismatching in the thermal expansion coefficient of each component material, generate cracks in the package and break the bonding wire. Please consult us before use.

■ Cleaning

For flux cleaning, immersion cleaning by ASAHIKLIN AK-225 is recommended. If using ultrasonic cleaning for unavoidable reasons, implementation conditions should not be beyond the specifications below. Before use, check and ensure that there is no defect.

- Frequency : 27 to 29 kHz
- Ultrasonic outlet : Below 0.25W/cm² *
- Cleaning time : Less than 30 sec.
- Cleaning solvent : ASAHIKLIN AK-225
- Others : In order to prevent the printedcircuit board and elements from contacting with ultrasonic oscillator, clean the flux while the sensor is suspended in the solution.

* Ultrasonic outlet per unit area (bottom area) of cleaning tank

■ Transportation

Excessive vibration during transport may deform the lead or damage the sensor. Carefully handle the exterior and interior boxes.

■ Avoid use in the highly-humid or dusty environment, the corrosive gas, an environment where organic solvent can be adhered.

■ Lead-forming and cuttings

- 1) Before soldering, perform lead forming at normal temperature.
- 2) When forming or cutting the lead, keep the spot at a distance of 3 mm 0.118 inch or more from the root of the lead.
- 3) When forming and cutting, fix the root of the lead.
- 4) Avoid mounting which may cause stress on the root of the lead.

Light Sensor NaPiCa terminology

Term	Symbol	Explanation
Reverse voltage	V_R	The applied voltage between the cathode and anode.
Photocurrent	I_L	The current that flows between the cathode and anode when light is applied.
Power dissipation	P	The electric power loss that occurs between the cathode and anode.
Operating temperature	T_{opr}	The workable ambient temperature range at which normal operation is possible under the condition of a prescribed allowable loss.
Storage temperature	T_{stg}	The ambient temperature range at which the sensor can be left or stored without applying voltage.
Peak sensitivity wavelength	λ_p	The wavelength of light at which sensitivity is at its maximum.
Dark current	I_D	The current between the cathode and anode when reverse voltage is applied during darkness.
Rise time	t_r	Time required for the output waveform to rise from 10 % to 90 % when light is applied.
Fall time	t_f	Time required for the output waveform to fall from 90 % to 10 % when light is cut.

Active infrared (area reflective) human detection sensor MA MOTION SENSOR

Features

- Reliable detection hardly influenced by reflectivity of targeted objects
- Ready-to-use with DC power source (built-in oscillation circuit type)
- Capability to adjoin sensors
- RoHS compliant

Typical Applications

- Equipment around water: automatic lighting of wash-units, toilets, automatic flush
- Stores and financial markets: automatic doors, lighting, ATM, visitor sensors
- Amusement equipment: seating detection for pachinko machines, game displays
- Medical equipment markets: noncontact switches

Measuring tolerance		Typical	%	5	10	15	Reflection rate: 90 % to 18 %					
Usable ambient brightness (Resistance to ambient light) *	Brightness of sensor surface	Maximum	lx	30,000							See the drawing (Fig. 1) on the next page.	
	Brightness of reflection surface	Maximum		24,000								

Notes : * Prevent direct light (within 30 ° against the optical axis of the sensor) from entering into the sensor.

- For thin short type:
Standard reflection board : 150 mm 5.906 inch square area, 90% reflection rate.
- For short type:
Standard reflection board: 100 mm 3.937 inch square area, 90% reflection rate.
- For middle type:
Standard reflection board: 200 mm 7.874 inch square area, 90% reflection rate.
- For long type:
Standard reflection board: 500 mm 19.685 inch square area, 90% reflection rate.

Notes : 1. Detecting an object within the maximum preset detection distance.

$$2. \text{Distance deviation} = \frac{a-b}{a} \times 100 (\%)$$

(a: detection distance of detection target with reflectance of 90 %.
b: detection distance of standard detection target with reflectance of 18 %.)

<Fig. 1>

[Brightness of sensor surface]

Notes : If sunlight or strobe/inverter light (including the regular reflection light from glasses and mirrors) directly enters from the inhibition area, those lights may cause malfunction of the sensor(sensor) from entering into the sensor.

[Brightness of reflection surface]

Absolute maximum rating

- Measuring condition: ambient temp.: 25 °C 77 °F

Items	Absolute maximum rating			
	Built-in oscillation circuit type		External triggering type	
	5 V.DC type	Free-ranging power type	5 V.DC type	Free-ranging power type
Power supply voltage	-0.3 V.DC to 6 V.DC	-0.3 V.DC to 30 V.DC	-0.3 V.DC to 6 V.DC	-0.3 V.DC to 30 V.DC

Usable ambient temperature	-25 °C to +75 °C +5 °F to +131 °F (No freezing)		-25 °C to +75 °C +5 °F to +131 °F (No freezing)	
Storage temperature	-30 °C to +85 °C -4 °F to +176 °F		-30 °C to +85 °C -4 °F to +176 °F	

Notes : * Thin short type is only: 100 mA

Electrical characteristics

- Measuring conditions : ambient temp.: 25 °C 77 °F; operating voltage: 5 V.DC type 5 V.DC, free-ranging power type 24 V.DC
- 1) Built-in oscillation circuit type

Items	Symbol	Thin short type*		Short type	Middle type	Long type	Measured conditions	
		NPN output type	PNP output type					
Rated operating voltage	Minimum	5 V.DC type : 4.5V.DC / Free-ranging power type : 5.5 V.DC						
	Typical	-						
	Maximum	5 V.DC type : 5.5 V.DC /Free-ranging power type : 27 V.DC						
Average current consumption (I _{out} =0 mA)	No detection	Minimum	-					
		Typical	4.5 mA		5 V.DC type : 4.5 mA Free-ranging power type : 5.6 mA			
		Maximum	6.2 mA		5 V.DC type : 6.2 mA Free-ranging power type : 7.8 mA			
	Detection	Minimum	-					
		Typical	7.0 mA	11.0 mA	5 V.DC type : 7.0 mA Free-ranging power type : 9.1 mA			
		Maximum	11.2 mA	15.2 mA	5 V.DC type : 11.2 mA Free-ranging power type : 14.2 mA			
Measuring cycle	Typical	T	8 ms/cycle					
Output characteristics	Remain voltage	Maximum	V _r	1 V.DC	1.2 V.DC	1 V.DC	I _t =100 mA	
	Leakage current	Maximum	II	5 μA		3 μA	V=30 V.DC	

Notes : * The thin short type is only available for 5 V.DC.

2) External triggering type (trigger conditions: trigger pulse width = 20 μs and trigger synchronization = 5 ms)

Items			Symbol	Thin short type*1		Short type	Middle type	Long type	Measured conditions
				NPN output type	PNP output type				
Rated operating voltage			Minimum	5 V.DC type : 4.5 V.DC / Free-ranging power type : 5.5 V.DC					
			Typical	-					
			Maximum	5 V.DC type : 5.5 V.DC/Free-ranging type : 27 V.DC					
Average current consumption	Without trigger input	Output OFF	Minimum	-					
			Typical	I _b		5 V.DC type: 0.1 mA/Free-ranging type: 1.0 mA			*2 ♣b
			Maximum			5 V.DC type: 0.3 mA/Free-ranging type: 1.8 mA			
		Output ON	Minimum	-					
			Typical	I _d		5 V.DC type: 0.5 mA/Free-ranging type: 1.4 mA			*2 ♣d
			Maximum			5 V.DC type: 3.4 mA/Free-ranging type: 4.5 mA			
	With trigger input	Output OFF	Minimum	-					
			Typical	I _a		5 V.DC type: 2.2 mA/Free-ranging type: 3.1 mA			*2 ♣a
			Maximum			5 V.DC type: 6.2 mA/Free-ranging type: 7.2 mA			
		Output ON	Minimum	-					
			Typical	I _c		5 V.DC type: 2.4 mA/Free-ranging type: 3.3 mA			*2 ♣c
			Maximum			5 V.DC type: 8.2 mA/Free-ranging type: 9.3 mA			
Measuring cycle (Trigger interval)			Typical	T _t	5 ms/cycle				
External trigger	Pulse width	Minimum	20 μs						
		Maximum	T _w		1/2 T _t			Half off the distance period	
	Level	Minimum	V _{TL}	0.8 V					
		Maximum	V _{TH}	3 V			*3		
Response performance: time from trigger pulse fall to detection output			Typical	T _r	5 ms				
Output characteristics	Remain voltage	Minimum	V _r	1 V.DC	1.2 V.DC	1 V.DC		I _t =10 mA	
	Leakage current	Maximum	I _l	5 μA		3 μA		V=30 V.DC	

Notes : *1. The thin short type is only available for 5 V.DC.

*2. The ratio between the 4 operating modes (♣a to ♣d) depends on the external trigger period and detector time, and the current consumption corresponds with this varying ratio.

*4. The output transistor is open collector.

The output transistor is turned ON by the sensor detection status and turned OFF by its non-detection status.

*3. A high level is established in the open state due to pull-up by the internal circuit. (Refer to the connector wiring diagram.)

Detection status: output transistor ON
Non-detection status: output transistor OFF

Detection status: output transistor ON
Non-detection status: output transistor OFF

Timing Chart

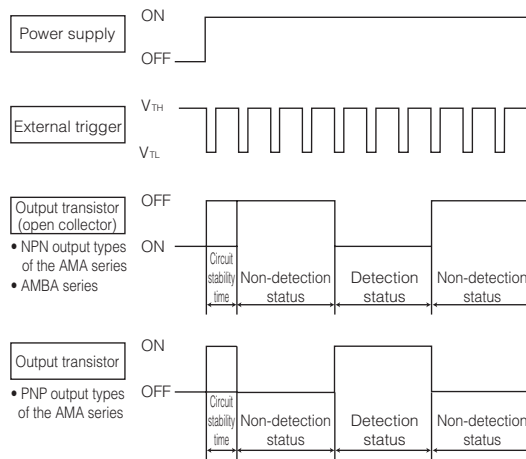

● Built-in oscillation circuit type

Notes : *1. Circuit stability time : Max. 12 ms

*2. During the time taken for the circuit to stabilize after the power is turned on, the ON/OFF status of the output transistor is not determined by whether the sensor is in the detection status or non-detection status.

External triggering type

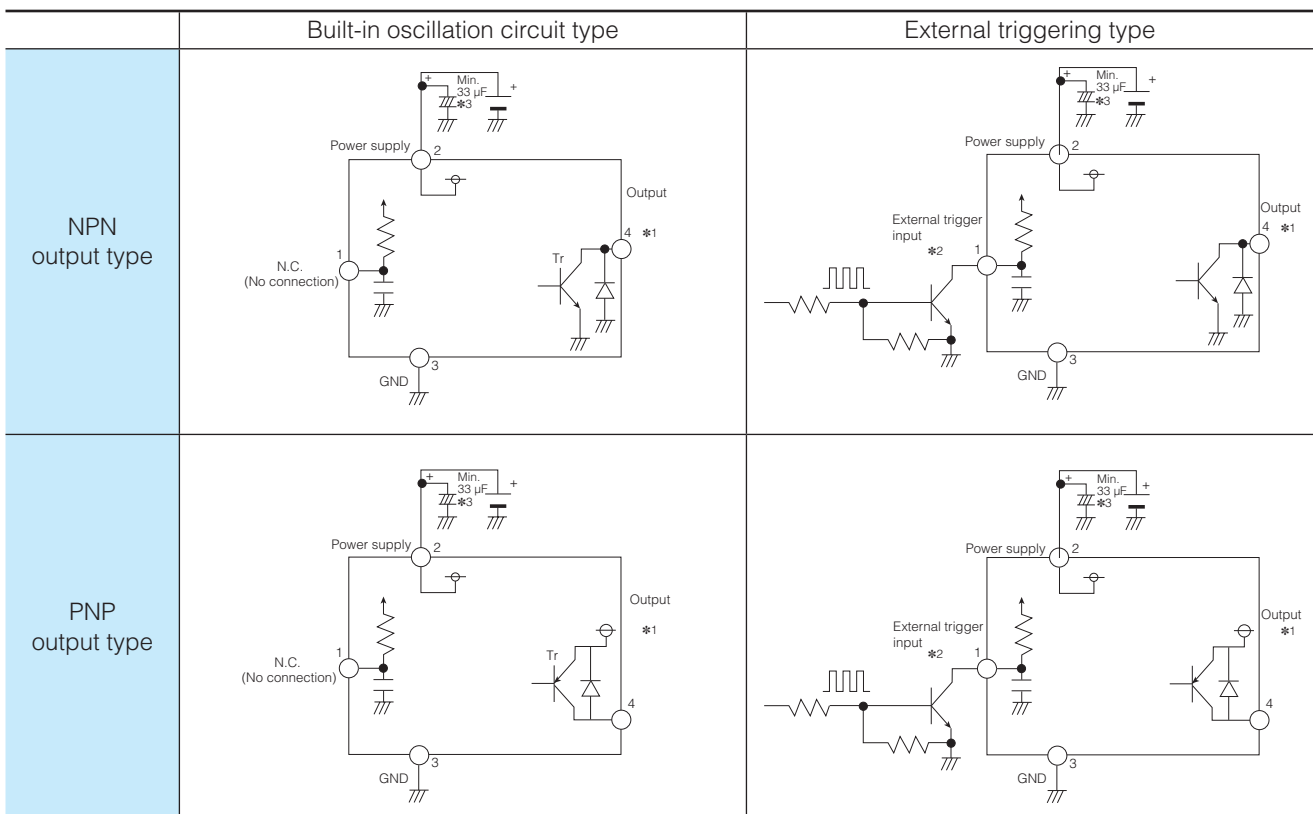

Notes : The sensor recognizes at the $V_{TH} \rightarrow V_{TL}$ edge of an external trigger that the external trigger has been input.

- Notes : *1. Circuit stability time: Max. 12 ms
- *2. During the time taken for the circuit to stabilize after the power is turned on, the ON/OFF status of the output transistor is not determined by whether the sensor is in the detection status or non-detection status.

How To Use

Wiring diagram of connector

- Notes : *1. The output transistor has an open collector structure.
- Detection status: Output transistor ON (connected to GND)
 - Non-detection status: Output transistor OFF (open state)
- *2. The status of the external trigger input is as follows:
- Open at the high level
 - GND (less than 0.8 V) at the low level
 - Do not apply a high voltage.
- *3. Install capacitor (of 33 μ F or over) on the power input terminal of the sensor in order to secure power superimposed noise resistance and stabilize the power supply voltage.

Reference Data

Operating region characteristics

How to interpret the graph

Example: Operating area of the Short Type with rated detection distance of 8 cm 3.150 inch.

Operating area within the dotted lines

Objects that enter the entire area are detected.

Note: If only part of the object is in the detection area, it is not detected.

Operating area within the solid lines

Objects that even partially enter the area are detected.

NOTES

■ Use environment

- 1) Avoid use in the steamy or dusty environment, the corrosive gas, an environment where organic solvent can be adhered.
- 2) When using in a high-noise environment, perform countermeasures such as installing capacitor (of 33 μ F or over) on the power input terminal of the sensor. Before use, check the performance under actual use conditions.

■ Wire connection

- 1) Before the power is supplied, recheck wiring as misconnection may damage the internal circuit. (ensure to avoid reverse connection)
- 2) Use wires shorter than 3 m 9.842 ft to protect the internal circuit. Before use, check under actual use conditions if there is no influence by surrounding environments.
- 3) Do not repeatedly attach/detach the connector.

■ Detecting part

- 1) Keep the detecting surface clean. The detecting surface is resistant to trash/ dust, however, if an excessive amount of trash/dust adhere to the surface, it may reduce the margin of detecting distance.
- 2) Dew condensation on the detecting surface may cause malfunction.
- 3) The sensor aims to detect human bodies. If the targeted object has extremely low reflectivity (e.g., objects frosted by black rubbers) or extremely high reflectivity (e.g., objects which regularly reflect: mirrors, glasses or glossy papers), the sensor may not be able to detect or the detecting distance may become unstable.
- 4) The front face of the lense and the case are polycarbonate-based. Generally they are stable against water, alcohol, oil, salt and weak acids. However, avoid alkalis, aromatic hydrocarbons and halogenated hydrocarbons as those substances may expand or melt the lense and the case.
- 5) If placing filters (covers) in front of the sensor and perform detection through the filters, following may occur: detection of the filters (covers), changes of the detecting distance or unstable operations.
- 6) If sensors are in facing positions, light from the opposing sensor may cause mutual interferences and malfunction. Before use, check the installation conditions.
- 7) When arranging multiple sensors in parallel, keep the interval of neighboring sensors as below or over. Before use, ensure that there is no mutual interference.

Part No.	Sensor interval
AMBA1 series	5 cm 1.969 inch
AMA1 series	8 cm 3.150 inch
AMBA2 series	10 cm 3.937 inch
AMBA3 series	20 cm 7.874 inch

■ Recommended mounting direction

As below, install the sensor for the X and Z advancing directions of the targeted object.

For general precautions, see "General precautions for motion sensors" in the next page.

■ Ambient operating conditions

- 1) Temperature: Refer to the absolute maximum ratings for the temperature of each individual sensor.
- 2) Humidity : 15 % to 85 % RH (No freezing nor condensation at low temperature)
- 3) Atmospheric pressure: 86 to 106 kPa
- 4) Because the humidity range differs depending on the ambient temperature, the humidity range indicated below should be used. Continuous operation of the switch is possible within this range, but continuous use near the limit of the range should be avoided. This humidity range does not guarantee permanent performance.

<MA Motion Sensor>

In general, degradation of electronic devices accelerates when they are operated under conditions of high temperature or high humidity. Before use, confirm the reliability of the sensors under the expected operating conditions.

- 5) The sensors do not have a water-proof or dust-proof construction. Depending on the ambient operating conditions, some means of providing protection from water and dust and preventing the formation of ice and condensation must be provided prior to using the sensors. If a sensor is used with a cover installed, the initial detection performance specifications may not be able to be met. Confirm the operation under the actual operating conditions.
- 6) Take care to avoid exposing the sensors to heat, vibration or impact since malfunctioning may result.

■ Concerning external surge voltages

Since the internal circuitry may be destroyed if an external surge voltages is supplied, provide an element which will absorb the surges.

■ Concerning power supplysuperimposed noise

- 1) Use a regulated power supply as the power supply. Otherwise, power supplysuperimposed noise may cause the sensors to malfunction.
- 2) To maintain the power supply noise performance, be certain to connect a capacitor (33 μ F or more) to the sensor power supply input terminal in order to stabilize the power supply voltage.

■ Drop damage

If the sensor is dropped, damage can occur resulting in incorrect operation. If dropped, be sure to do a visual check of the exterior for noticeable damage and check the operation characteristics for faulty operation.

■ Concerning the circuit sides

Since the circuit sides given in this catalog are not protected in terms of circuit design, check out the performance and reliability of the circuits prior to using the sensors.

Safety Precautions

Head the following precautions to prevent injury or accidents.

- Do not use these sensors under any circumstances in which the range of their ratings, environment conditions or other specifications are exceeded. Using the sensors in any way which causes their specifications to be exceeded may generate abnormally high levels of heat, emit smoke, etc., resulting in damage to the circuitry and possibly causing an accident.
- Before connecting a connector, check the pin layout by referring to the connector wiring diagram, specifications diagram, etc., and make sure that the connector is connected properly. Take note that mistakes made in connection may cause unforeseen problems in operation, generate abnormally high levels of heat, emit smoke, etc., resulting in damage to the circuitry.
- Do not use any motion sensor which has been disassembled or remodeled.
- Protection circuit recommended The possible failure mode is either open or short of the output transistor. An excess heat is the cause for short mode failure. For any important and serious application in terms of safety, add protection circuit or any other protection method.

Infrared Array Sensor Grid-EYE

High Precision Infrared Array Sensor based on Advanced MEMS Technology

Features

- Temperature detection of two-dimensional area: 8 × 8 (64 pixels)
- Digital output (capability of temperature value output)
- Compact SMD package (adaptively to reflow mounting)
- RoHS compliant

Typical Applications

- High function home appliances (microwaves and air-conditioners)
- Energy saving at office (air-conditioning/lighting control)
- Digital signage
- Automatic doors/elevators

Ordering Information

AMG 8 8

Types

Product name	Number of pixel	Operating voltage	Amplification factor	Part number
Infrared array sensor Grid-EYE	64 (Vertical 8 × Horizontal 8 Matrix)	3.3 V.DC	High gain	AMG8831
			Low gain	AMG8832
		5.0 V.DC	High gain	AMG8851

Human detection distance *1	Max. 5 m 16.404 ft	
Viewing angle	Typical 60 °	
Optical axis gap	Within Typical $\pm 5.6\text{ }^{\circ}$	
Current consumption	Typical 4.5 mA (normal mode) Typical 0.2 mA (sleep mode) Typical 0.8 mA (stand-by mode)	
Setup time	Typical 50 ms (Time to enable communication after setup) Typical 15 s (Time to stabilize output after setup)	

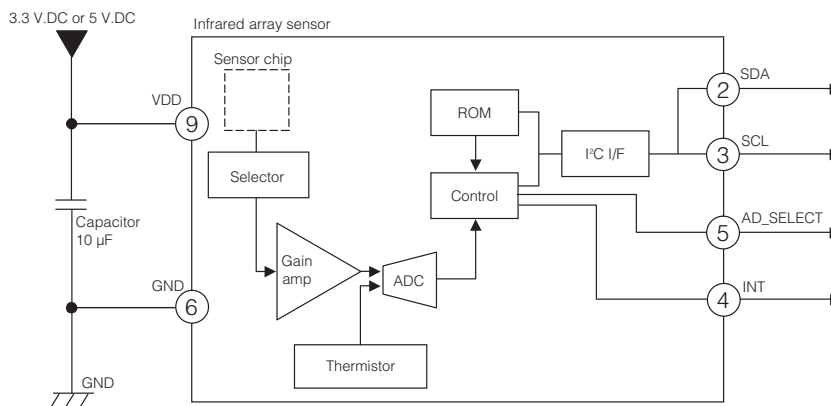

Note: *1 To have more than $4\text{ }^{\circ}\text{C}$ $7.2\text{ }^{\circ}\text{F}$ of temperature difference from background
 Detection object size: $700 \times 250\text{ mm}$ $27.559 \times 9.843\text{ inch}$ (Assumable human body size)

Performance

Item	Performance
Number of pixel	64 (Vertical 8 × Horizontal 8 Matrix)
External interface	I ² C (fast mode)
Frame rate	Typical 10 frames/sec or 1 frame/sec
Operating mode *1	Normal Sleep Stand-by (10 sec or 60 sec intermittence)
Output mode	Temperature output
Calculate mode	No moving average or Twice moving average
Temperature output resolution	$0.25\text{ }^{\circ}\text{C}$
Number of sensor address	2 (I ² C slave address)
Thermistor output temperature range	$-20\text{ }^{\circ}\text{C}$ to $80\text{ }^{\circ}\text{C}$ $-4\text{ }^{\circ}\text{F}$ to $+176\text{ }^{\circ}\text{F}$
Thermistor output resolution	$0.0625\text{ }^{\circ}\text{C}$

Note: *1 Normal Mode : normal operation mode; Sleep Mode: detection is off (output and data reading not possible); Standby Mode: 1 frame measuring intermittently every 10 or 60 sec.

Internal Circuit

* INT terminal ④ normally has same voltage as VDD. When interrupting, same as GND (0V)

Pixel Array And Viewing Field

(1) Pixel array
Pixel array from 1 to 64 is shown below.

(2) Viewing field
Sensor viewing field (typical) is shown below.

Optical Properties

(1) Each pixel's viewing central angle
Sensor's optical center (the origin of graph below) gap: within $\pm 5.6^\circ$ (Typical) (Both horizontal and vertical directions)

(2) Each pixel's viewing angle (half angle)
Central 4 pixels (Pixel No. 28, 29, 36, 37) viewing angle (half angle): horizontal direction 7.7° (Typical) vertical direction 8° (Typical)

Dimensions

External dimensions

Number	Terminal Name	Number	Terminal Name
①	NC	⑧	NC
②	SDA	⑨	VDD
③	SCL	⑩	AVDD-PC
④	INT	⑪	NC
⑤	AD_SELECT	⑫	DVDD-PC
⑥	GND	⑬	VPP
⑦	NC	⑭	NC

Note : Leave terminal "NC (No. ①, ⑦, ⑧, ⑪ and ⑭)" unconnected.
Make electrical potential of terminals ⑨ and ⑬ the same.

Recommended PC board pad

General tolerance : $\pm 0.2 \pm 0.08$

unit : mm inch

External Circuit

- (1) In case of setting I²C slave address of the sensor 1101000
 * Connect terminal ⑤ (AD_SELECT) to GND.

- (2) In case of setting I²C slave address of the sensor 1101001
 * Connect terminal ⑤ (AD_SELECT) to VDD.

This circuit is an example to drive infrared array sensor "Grid-EYE", so that we will not take any responsibility of loss which is due to this circuit.

Packing Format (Tape and Reel)

Tape dimensions

Dimensions of tape reel

unit : mm inch

Packing Format (Tape and Reel)

■ Precaution for fundamental structure of sensor

Infrared Array Sensor is a thermopile type infrared sensor which detects the amount of infrared rays. Below conditions generally degrade the temperature accuracy. Carefully check the performance and stability under actual use conditions, and perform temperature corrections when necessary.

- When heating elements exist near the mounting position of the sensor.
- When the sensor is exposed to cold or hot air.
- When the temperature of the sensor body rapidly changes.
- When substances (e.g., glasses, acrylics or steams), which hardly transmit a far infrared ray, exist between the sensor and the detected object.
- When substances (e.g., foreign substances or water), which hardly transmit a far infrared ray, adhere to the lense of the sensor.

■ Use environment

- 1) Temperature: See the specifications
- 2) Humidity: Between 15% and 85% R.H. (Avoid freezing and dew condensation)
- 3) Atmospheric pressure: Between 86 and 106 kPa

- 4) Vibrations and shocks may damage the sensor, and cause malfunction and performance deterioration. If loads and shocks are applied on the lense, the damaged sensor may cause malfunction and performance deterioration.
- 5) The product is not water/splash-proof. Perform water/dust-proofing and dew condensation/freezing countermeasures in accordance with use environment. When dew condensation occurs, responsiveness of heat source detection may delay for several seconds.
- 6) Avoid use and storage in the corrosive gas (organic solvent, sulfurous acid and hydrogen sulfide gases) to avoid malfunction and performance deterioration.
- 7) Use surge absorbers as applying the external surge voltage may damage the internal circuit.
- 8) Malfunction may occur near electric noises from static electricity, lightning, broadcast or amateur radio stations and mobile phones.
- 9) The sensor can continuously operate within the range of using ambient temperature (using ambient humidity). However, ensure that humidity is within the range described in the following page as humidity varies according to temperature. Avoid the continuous operation near the operational limit. The temperature range does not guarantee the durability.

Other precautions

These specifications are for individual components. Before use, carefully check the performance and quality under actual use conditions to enhance stability.

- 1) Once the individual sensor is dropped, do not use. Drop may cause functional disorders.
- 2) Writing to the unspecified register/with the unspecified bit may cause malfunction and performance deterioration. (please consult us)
- 3) Misconnection and use beyond the specified temperature range may damage the product.
- 4) Once below shocks are applied, do not use the product as applying highfrequency oscillation to the sensor body may damage the product.
 - Contact with metal objects
 - Contact with other sensors
- 5) Follow the instructions below as static electricity may damage the product.
 - For storage and transportation, avoid plastic containers which are easily electrified.
 - When storing and transporting the sensor, choose the environment where static electricity is hardly generated (e.g., humidity between 45 and 60 %) and protect the product by using electroconductive packaging materials.
 - Once unpacked, perform antistatic countermeasures.
 - (1) Operators handling sensors must wear antistatic cloths and human body grounding devices.
 - (2) Cover the surface of workbench by electro-conductive plates and ground measuring instruments and jigs.
 - (3) Use the soldering iron which has a small leakage current or ground the soldering tip.
 - (4) Ground the assembling equipment.
 - Use a stabilized power supply. A power superimposed noise may cause malfunction.

Range of using ambient temperature (using ambient humidity)

The sensor can continuously operate within the range of using ambient temperature (using ambient humidity). However, ensure that humidity is within the range below as humidity varies according to temperature. Avoid the continuous operation near the operational limit. Before use, check the stability under the usage environment as high humidity or high temperatures generally accelerates deterioration of the electronic component.

- The temperature range does not guarantee the durability

Mounting

Use the land of the printed-circuit board on which the sensor is securely fixed. The recommended printed-circuit board is FR4 (thickness 1.6 mm 0.063 inch). When mounting on the deprecated circuit board, carefully check the performance and quality under actual use conditions before use.

- A large noise on the power supply may cause malfunction. Place the recommended capacitor near the sensor (within 20 mm 0.787 inch of the wiring pattern length) between sensor input terminals (VDD-GND) to secure power superimposed noise resistance. Test with the actual machine and re-select the capacitor with optimal capacitance.
- Prevent the metal part of other electronic components from contacting with the sensor body as the upper face (where part numbers are imprinted) of the sensor is GND.

Soldering

When soldering, avoid the external thermal influence. Heat deformation may damage the sensor or deteriorate its performance. Use the non-corrosive rosin flux.

1) Manual soldering

- Raise the temperature of the soldering tip between 350 and 400 °C 662 and 752 °F (30 and 60 W) and solder within 3 seconds.
- The sensor output may vary if the load is applied on the terminal during soldering.
- Keep the soldering tip clean.

2) Reflow soldering

Below are recommended temperature profiles/conditions of reflow.

- When printing cream solder, the screen printing method is recommended.
- For the foot pattern, see the recommended diagram of the printed-circuit board.
- Carefully align the terminal with the pattern as self-alignment may not be reliable.
- The temperature of the profile is the value measured near the terminal on the printed-circuit board.
- After reflowing, when performing reflow soldering on the back surface of the circuit board, use an adhesive to fix the board.

- 3) After soldering, do not apply stress on the soldered part when cutting or bending the circuit board.
- 4) Rework soldering
 - Complete rework at a time.
 - Use a flattened soldering tip when performing rework on the solder bridge. Do not add the flux.
 - Keep the soldering tip below the temperature described in the specifications.
- 5) Prevent human hands or metal pieces from contacting with the sensor terminal. Such contact may cause anomalous outlets as the terminal is exposed to the atmosphere.
- 6) After soldering, prevent chemical agents from adhering to the sensor when applying coating to avoid insulation deterioration of the circuit board.

■ Wire connection

- 1) Correctly wire as in the connection diagram. Reverse connection may damage the product and degrade the performance.
- 2) Do not use idle terminals. Such use may damage the sensor.
- 3) For cable wiring, use shield wires with possibly short wiring lengths to prevent the influence of the noise.

■ Cleaning

Avoid ultrasonic cleaning as this may cause disconnection of the wire.

■ Storage and transportation

- 1) Excessive vibrations and shocks during transport may damage the product. Carefully handle the exterior box and the reel.
- 2) Extremely bad storage conditions may deteriorate solderability or characteristics, and defect the appearance. Recommended conditions of the storage place are below.
 - Temperature: 0 to 45 °C 32 to 113 °F
 - Humidity: Below 70 % R.H.
 - Atmosphere: Low-dust and free from noxious chemicals such as sulfurous acid gas
- 2) The package is moisture-proof due to its sensitivity to humidity. When storing the sensor, follow the instructions below.
 - Promptly use after opening. (within a week, below 30 °C 86 °F/60 % R.H.)
 - Once unpacked, preserving in a moisture-proof manner, such as keeping in a moisture-proof bag with silica gels, is recommended for long-term storage. (use within 3 months)

* During soldering, when adding thermal stress in a moisture absorbing state, moisture evaporates, swells and generates stress to the internal package. To avoid swellings and cracks in the surface of the package, follow the soldering conditions.

■ Special notes

We exert maximum efforts for quality control of the product, however :

- 1) To prevent occurrence of unexpected circumstances, please inform us of the specifications of your product, customers, use conditions and details of the attachment position.
- 2) Have sufficient margin values of driving/performance guarantee described in the specifications and apply safety measures with double circuits, if serious effects on human lives or property are predicted due to a quality failure of the product. Those countermeasures are also for the product liability.

- 3) A warranty period is one year after the delivery to your company. Quality assurance is limited to the items and the scopes described in the specifications.

If a defect is found after the delivery, we will promptly provide a replacement or change/repair the defect part at the place of delivery in good faith. Exceptions are below.

- Damages by a failure or a defect which arose after the delivery.
- After the delivery, when storing and transporting, if conditions other than conditions in the specifications are applied to the product.
- Damages by unforeseen phenomenon which cannot be predicted with the technologies available at the time of delivery.
- Damages by natural and anthropogenic disasters, such as earthquake, flood, fire and war, which are beyond our reasonable control.

■ Export control

[Customers within Japan]

This product is subject to the Foreign Exchange and Foreign Trade Act enacted by the Japanese government. When exporting the product from Japan or taking the product out of Japan, export permission from the Japanese government is required. (as of Aug 2015). Do not use the product for other purposes. When disposing surplus stock or inventory, prevent unauthorized reuse and do not sell the products to the third party.

[Customers outside Japan]

This product is subject to the laws concerning security export control (the Foreign Exchange and Foreign Trade Act) enacted by the Japanese government. We obtain export permission by the Japanese government in order to resale/provide the products. Do not use the product for other purposes. If exporting the product from your country, laws or regulations of the country may restrict the export. When disposing surplus stock or inventory, prevent unauthorized reuse and do not sell the products to the third party.

Pressure Sensor PS-A

Pressure sensor
Built-in amplifier and compensating circuit

Features

- Built-in amplifier and temperature compensation circuit, no need for circuit design and characteristic adjustment
- High accuracy and reliability : overall accuracy $\pm 1.25\%$ FS (Standard), $\pm 2.5\%$ FS (Low-pressure type)
- Compact size, space-saving : compatible size for PS type (Standard/Economy, S and M packages)
- RoHS compliant

Typical Applications

- Industrial use : pressure switches and pneumatic components, compressed air pressure measuring devices
- Medical use : blood pressure meters, oxygen generator and airbeds
- Others : pressure sensing devices for air pressure mediums

Low-pressure type

- Water level detection for domestic appliances: washing machines and dishwashers
- Air pressure control : cleanrooms and smoking rooms
- Medical applications : breathing pressure measuring devices

NOTES

■ Mounting

Use the land of the printed-circuit board on which the sensor is securely fixed.

■ Soldering

Avoid the external thermal influence as the product has a limited thermal capacity due to its compact structure. Heat deformation may damage the sensor or deteriorate its performance. Use the non-corrosive rosin flux. Prevent the flux from entering into the inside of the product as the sensor is exposed to the atmosphere.

- 1) Manual soldering
 - Raise the temperature of the soldering tip between 260 and 300 °C 500 and 572 °F (30 W) and solder within 5 seconds.
 - The sensor output may vary if the load is applied on the terminal during soldering.
 - Keep the soldering tip clean.
- 2) DIP soldering (DIP Terminal)
 - Keep the temperature of the DIP solder tank below 260 °C 572 °F and solder within 5 seconds.
 - To avoid heat deformation, do not perform DIP soldering when mounting on the circuit board which has a small thermal capacity.
- 3) Reflow soldering (SMD Terminal)
 - The recommended reflow temperature profile conditions are given below.

- We recommend the screen solder printing method as the method of cream.
 - Please refer to the recommended PC board specification diagram for the PC board foot pattern.
 - Self alignment may not always work as expected, therefore, please carefully the position of the terminals and pattern.
 - The temperature of the profile is assumed to be a value measured with the printed wiring board of the terminal neighborhood.
 - Please evaluate solderability under the actual mounting conditions since welding and deformation of the pressure inlet port may occur due to heat stress depending on equipments or conditions.
- 4) Rework soldering
 - Complete rework at a time.
 - Use a flattened soldering tip when performing rework on the solder bridge. Do not add the flux.
 - Keep the soldering tip below the temperature described in the specifications.
 - 5) Avoid drop and rough handling as excessive force may deform the terminal and damage soldering characteristics.
 - 6) Keep the circuit board warpage within 0.05 mm of the full width of the sensor.
 - 7) After soldering, do not apply stress on the soldered part when cutting or bending the circuit board.
 - 8) Prevent human hands or metal pieces from contacting with the sensor terminal. Such contact may cause anomalous outlets as the terminal is exposed to the atmosphere.
 - 9) After soldering, prevent chemical agents from adhering to the sensor when applying coating to avoid insulation deterioration of the circuit board.
 - 10) Please consult us concerning leadfree soldering.

■ Wire connection

- 1) Correctly wire as in the connection diagram. Reverse connection may damage the product and degrade the performance.
- 2) Do not use idle terminals to prevent damages to the sensor.

■ Cleaning

- Prevent cleaning liquid from entering the inside of the product as the sensor is exposed to the atmosphere.
- Do not perform ultrasonic cleaning in order to prevent damages to the product.

■ Environment

- 1) Avoid use and storage in the corrosive gas (organic solvent, sulfurous acid and hydrogen sulfide gases) which negatively affects the product.
- 2) Install the capacitor on the power supply terminal of the sensor and stabilize supply voltage to maintain a superimposed noise resistance. Recommended installation is to arrange 0.1 μF and 1,000 pF in parallel. Before use, check the noise resistance and select/add the optimal capacitor.
- 3) Use surge absorbers as applying the external surge voltage may damage the internal circuit.
- 4) Malfunction may occur near electric noises from static electricity, lightning, broadcast or amateur radio stations and mobile phones.
- 5) Avoid use in a place where these products come in contact with water as the sensor does not have a splash-proof construction.
- 6) Avoid use in an environment where these products cause dew condensation. When water attached to the sensor chip freezes, the sensor output may be fluctuated or damaged.
- 7) Due to the structure of the pressure sensor chip, the output varies under light. Do not expose the sensor chip to light when applying a voltage by using a transparent tube.
- 8) Do not apply high-frequency oscillation, such as ultrasonic waves, to the product.

■ Quality check under actual use conditions

These specifications are for individual components. Before use, carefully check the performance and quality under actual use conditions to enhance stability.

■ Other precautions

- 1) The wrong mounting method and the pressure range may invite the risk of accidents.
- 2) Only applicable pressure medium is dry air. Avoid use in the corrosive gas (organic solvent, sulfurous acid and hydrogen sulfide gases) or other mediums containing moisture or foreign substances. Such mediums may damage or break the product.
- 3) The pressure sensor chip is located inside the pressure introduction port. Do not insert foreign substances, such as wires, into the port as those substances may damage the chip and close the port. Do not block the atmosphere introduction port.
- 4) Use electric power within the rated power range. Use beyond the range may damage the product.
- 5) Follow below instructions as static electricity may damage the product:
 - (1) For Storage, short the circuit between terminals by using conductive substances or wrap the whole chip with aluminum foil. For storage and transportation, avoid plastic containers which are easily electrified.
 - (2) Before use, connect electrified materials on desk and operators to the ground in order to safely discharge static electricity.
- 6) Carefully select and fix tubes, introduction pipes and products based on the working voltage. Please contact us for any inquires.
- 7) After mounding the pressure sensor, prevent the potting agent from entering the pressure and the atmosphere introduction ports when coating the circuit board. Use the elastic resin as the heated resin may expand, contract and apply pressure to the sensor. After coating, carefully check if the sensor can be used.

Safety precautions

Accidents occur at certain probability for Electronic components and equipment in spite that we keep working on a improvement in quality and reliability. In order that accidents result in injury or death, fire accidents and social damages do not occur, please pay enough attention to safety design such as redundancy design, fire spread preventing design and malfunction preventing design etc.

Our quality standards fall into the following three categories depending on the applications of the products: Reference Standards, Special Standards, and Specified Standards that meet the quality assurance program designated by the customer. These quality standards have been established so that our products will be used for the applications listed below.

Reference Standards: Computers, office automation equipment, communications equipment, audio-video products, home electrical appliances, machine tools, personal devices, industrial robots

Special Standards: Transportation equipment (automobiles, trains, ships, etc.), traffic signal equipment, crime and disaster prevention devices, electric power equipment, various safety devices, and medical equipment not directly targeted for life support

Specified Standards: Aircraft equipment, aeronautical and space equipment, seabed relay equipment, nuclear power control systems, and medical equipment, devices and systems for life support

Before considering the use of our products under the following conditions, you must contact one of our customer service representatives without fail and exchange written specifications.

- (1) When our products are to be used in any of the applications listed for the Special Standards or Specified Standards
- (2) When, even for any of the applications listed for the Reference Standards, our products may possibly be used beyond the range of the specifications, environment or conditions listed in the document or when you are considering the use of our products in any conditions or an environment that is not listed in the document

Pressure Sensor PS/PF

High precision pressure sensor (without amp.)

Features

- Compact size (PS type)
- High accuracy and liner characteristic
- Broad line-up
- RoHS compliant

Typical Applications

- Industrial use: pressure switches and pneumatic components, compressed air pressure measuring devices and airbeds
- Medical use: blood pressure meters, oxygen generator and airbeds
- Others: pressure sensing devices for air pressure mediums

Sensitivity-temperature characteristics *4	±10 %FS	±2.5 %FS					±1.3 %FS	

Notes : *1 Unless otherwise specified, measurements were taken with a drive current of ±0.01 mA.DC and humidity ranging from 25% to 85%.

*2 Please consult us if a pressure medium other than air is to be used.

*3 For PS pressure sensor only

*4 This is the regulation which applies within the compensation temperature range.

*5 Please consult us if the intended use involves a negative pressure.

Reference Data

[PS pressure sensor]

● Characteristics data

1.-(1) Output characteristics

ADP41913

Drive current : 1.0 mA.DC ; temperature : 30 °C 86 °F

1.-(2) Offset voltage - temperature characteristics

ADP41913

Drive current : 1.0 mA.DC; rating ±3.5 %FS

1.-(3) Sensitivity -temperature characteristics

ADP41913

Drive current : 1.0 mA.DC; rating ±2.5 %FS

● Pressure cycle range (0 to rated pressure)

Tested sample : ADP41913, temperature : 100 °C 212 °F, No. of cycle: 1×10⁶

Offset voltage range

Output span voltage range

Even after testing for 1 million times, the variations in the offset voltage and output span voltage are minimal.

[PF pressure sensor]

● Characteristics data

1.-(1) Output characteristics

ADP1141

Drive current : 1.5 mA.DC; temperature : 30 °C 86 °F

1.-(2) Offset voltage - temperature characteristics

ADP1141

Drive current : 1.5 mA.DC; rating ± 5 %FS

1.-(2) Sensitivity - temperature characteristics

ADP1141

Drive current : 1.5 mA.DC; rating ± 2.5 %FS

● Pressure cycle range (0 to rated pressure)

Tested sample : ADP1131, temperature : 25 °C 77 °F

Offset voltage range

Output span voltage range

Even after testing for 1 million times, the variations in the offset voltage and output span voltage are minimal.

Evaluation Test

Classification	Tested item	Tested condition	Result
Environmental characteristics	Storage at high temperature	Temperature : Left in a 120 °C 248 °F constant temperature bath Time : 1,000 hrs.	Passed
	Storage at low temperature	Temperature : Left in a -40 °C -40 °F constant temperature bath Time : 1,000 hrs.	Passed
	Humidity	Temperature/humidity : Left at 40 °C 104 °F, 90 % RH Time : 1,000 hrs.	Passed
	Temperature cycle	Temperature : -40 °C to 120 °C -40 °F to 248 °F 1 cycle : 30 Min. Times of cycle : 100	Passed
Endurance characteristics	High temperature/ high humidity operation	Temperature/humidity : 40°C 104 °F, 90% RH Operation times : 10 ⁶ , rated voltage applied.	Passed
Mechanical characteristics	Vibration resistance	Double amplitude : 1.5 mm 0.059 inch Vibration : 10 to 55 Hz Applied vibration direction : X, Y, Z 3 directions Times : 2 hrs each	Passed
	Dropping resistance	Dropping height : 75 cm 29.528 inch Times : 2 times	Passed
	Terminal strength	Pulling strength : 9.8 N {1 kgf}, 10 sec. Bending strength : 4.9 N {0.5 kgf}, left and right 90 ° 1 time	Passed
Soldering resistance	Soldered in DIP soldering bath	Temperature : 230 °C 446 °F Time : 5 sec.	Passed
	Temperature	Temperature : 260°C 500 °F Time : 10 sec.	Passed

Note: For details other than listed above, please consult us.

NOTES

■ Mounting

Use the land of the printed-circuit board on which the sensor is securely fixed.

■ Soldering

Avoid the external thermal influence as the product has a limited thermal capacity due to its compact structure. Heat deformation may damage the sensor or deteriorate its performance. Use the non-corrosive rosin flux. Prevent the flux from entering into the inside of the product as the sensor is exposed to the atmosphere.

- 1) Manual soldering
 - Raise the temperature of the soldering tip between 260 and 300 °C 500 and 572 °F (30 W) and solder within 5 seconds.
 - The sensor output may vary if the load is applied on the terminal during soldering.
 - Keep the soldering tip clean.
- 2) DIP soldering (DIP Terminal)
 - Keep the temperature of the DIP solder tank below 260 °C 500 °F and solder within 5 seconds.
 - To avoid heat deformation, do not perform DIP soldering when mounting on the circuit board which has a small thermal capacity.
- 3) Reflow soldering (SMD Terminal)
 - The recommended reflow temperature profile conditions are given below.

- We recommend the screen solder printing method as the method of cream.
 - Please refer to the recommended PC board specification diagram for the PC board foot pattern.
 - Self alignment may not always work as expected, therefore, please carefully the position of the terminals and pattern.
 - The temperature of the profile is assumed to be a value measured with the printed wiring board of the terminal neighborhood.
 - Please evaluate solderability under the actual mounting conditions since welding and deformation of the pressure inlet port may occur due to heat stress depending on equipments or conditions.
- 4) Rework soldering
 - Complete rework at a time.
 - Use a flattened soldering tip when performing rework on the solder bridge. Do not add the flux.
 - Keep the soldering tip below the temperature described in the specifications.
 - 5) Avoid drop and rough handling as excessive force may deform the terminal and damage soldering characteristics.
 - 6) Keep the circuit board warpage within 0.05 mm of the full width of the sensor.
 - 7) After soldering, do not apply stress on the soldered part when cutting or bending the circuit board.
 - 8) Prevent human hands or metal pieces from contacting with the sensor terminal.
Such contact may cause anomalous outlets as the terminal is exposed to the atmosphere.

- 9) After soldering, prevent chemical agents from adhering to the sensor when applying coating to avoid insulation deterioration of the circuit board.
- 10) Please consult us concerning leadfree soldering.

■ Cleaning

- Prevent cleaning liquid from entering the inside of the product as the sensor is exposed to the atmosphere.
- Do not perform ultrasonic cleaning in order to prevent damages to the product.

■ Environment

- 1) Avoid use and storage in the corrosive gas (organic solvent, sulfurous acid and hydrogen sulfide gases) which negatively affects the product.
- 2) Avoid use in a place where these products come in contact with water as the sensor does not have a splash-proof construction.
- 3) Avoid use in an environment where these products cause dew condensation.
When water attached to the sensor chip freezes, the sensor output may be fluctuated or damaged.
- 4) Due to the structure of the pressure sensor chip, the output varies under light.
Do not expose the sensor chip to light when applying a voltage by using a transparent tube.
- 5) Do not apply high-frequency oscillation, such as ultrasonic waves, to the product.

■ Quality check under actual use conditions

These specifications are for individual components. Before use, carefully check the performance and quality under actual use conditions to enhance stability.

■ Other precautions

- 1) The wrong mounting method and the pressure range may invite the risk of accidents.
- 2) Only applicable pressure medium is dry air. Avoid use in the corrosive gas (organic solvent, sulfurous acid and hydrogen sulfide gases) or other mediums containing moisture or foreign substances. Such mediums may damage or break the product.
- 3) The pressure sensor chip is located inside the pressure introduction port. Do not insert foreign substances, such as wires, into the port as those substances may damage the chip and close the port. Do not block the atmosphere introduction port.
- 4) Use electric power within the rated power range. Use beyond the range may damage the product.
- 5) Follow below instructions as static electricity may damage the product:
 - (1) For Storage, short the circuit between terminals by using conductive substances or wrap the whole chip with aluminum foil. For storage and transportation, avoid plastic containers which are easily electrified.
 - (2) Before use, connect electrified materials on desk and operators to the ground in order to safely discharge static electricity.
- 6) Carefully select and fix tubes, introduction pipes and products based on the working voltage. Please contact us for any inquiries.

APPLICATION CIRCUIT DIAGRAM (EXAMPLE)

The pressure sensor converts a voltage by constant current drive and if necessary, amplifies the voltage. The circuit on the right is a typical use example.

MOUNTING METHOD

The general method of air pressure transmission varies depending on the low/high pressure condition.

• Usage note

- (1) Select a study pressure introduction pipe to avoid pressure leak.
- (2) Securely fix the pressure introduction pipe to avoid pressure leak.
- (3) Do not block the pressure introduction pipe.

Methods of transmitting air pressures

EXPLANATION OF TERMS

■ Pressure object

This is what can be used to activate the pressure sensor.

(The Panasonic Corporation pressure sensor can be used with gas.)

■ Rated pressure

The pressure value up to which the specifications of the pressure sensor are guaranteed.

■ Maximum applied pressure

The maximum pressure that can be applied to the pressure sensor, after which, when the pressure is returned to below the rated pressure range, the specifications of the pressure sensor are guaranteed.

■ Temperature compensation range

The temperature range across which the specification values of the pressure sensor are guaranteed.

■ Drive current (voltage)

The supply current (voltage) required to drive a pressure sensor.

■ Output span voltage

The difference between the rated output voltage and the offset voltage. The output span voltage is also called the full-scale voltage (FS).

■ Offset voltage

The output voltage of a pressure sensor when no pressure is applied.

■ Rated pressure output voltage

Output voltage when rated pressure is applied.

■ Linearity

When the pressure is varied from no load to the rated pressure, the linearity is the amount of shift between the straight line that joins the no-load output voltage value and the rated pressure output voltage value (expressed as the ratio of the amount of shift (D1) at half of the rated pressure value with respect to the full scale voltage (FS)).

■ Output hysteresis

The ratio of the difference (D2) in the no-load output voltages when the pressure is varied from no load to the rated pressure then reduced back to no load, with respect to the full scale voltage (FS).

■ Offset voltage temperature characteristic

The variation of the offset voltage with changes in ambient temperature. The difference between the offset voltage at the standard temperature and the offset values at the compensation lower limit temperature (low temperature) (D1) and compensation upper limit temperature (high temperature) (D2) are obtained, and the offset voltage temperature characteristic is expressed as the ratio of the larger of these two differences (absolute) with respect to the full scale voltage (FS).

■ Temperature sensitivity characteristic

The variation of the sensitivity with changes in ambient temperature (variation in full scale (FS)). The difference between the full scale voltage at the standard temperature (FS) and the full scale values at the compensation lower limit temperature (low temperature) (FS1) and compensation upper limit temperature (high temperature) (FS2) are obtained, and the offset voltage temperature characteristic is expressed as the ratio of the larger of these two differences (FS1 - FS and FS2 - FS (absolute)) with respect to the full scale voltage (FS).

■ Bridge resistance

Refers to the resistance value of a piezoresistance formed on a monolithic silicon substrate.

For example, the values of the resistances R1 to R4 in the bridge are typically 5 kΩ each.

* When the resistances of the resistive elements R1 to R4 that comprise the bridge are 5 kΩ each, the equivalent composite resistance of the bridge is 5 kΩ (3 kΩ bridges are also available).

■ Overall accuracy

Accuracy of offset voltage and rated pressure output voltage within the temperature compensation range.

ISO14001 Certificate of approval

Panasonic Automation Controls Business Unit, which develops, manufactures and sells such as relays and switches, is certified according to the ISO 14001 environmental management system standard established by the International Standards for Organization (ISO).

Through our business activities, which objectives are to live in harmony with the global environment and contribute to the realization of a sustainable society, we have been making efforts to reduce greenhouse gases and promote recycling of resources. Furthermore, with due consideration to biodiversity, we have been working for improving the global environment and living in harmony with the international community.

ISO9001 Certificate of approval

Our Switching Device Division, which handles from development to production and marketing, has been approved for certification of the ISO9001 quality assurance standard established by the International Standards for Organization (ISO).

This achievement was officially registered by the certification organizations United Kingdom Accreditation Service (UKAS) and the Dutch accreditation council Raad voor Accreditatie (RVA) on Jun 29, 1993, and additionally certified by the German accreditation system Deutscher Akkreditierungs Rat (DAR) and Joint Accreditation System of Australia & New Zealand (JASANZ) on January 17, 1995 in our comprehensive product range from mechanical to semiconductor relays.

ISO/TS16949 Certificate of approval

Our Switching Device Division has been accredited for ISO/TS16949, covering our quality management system for an entire spectrum of automotive products ranging from mechanical to semiconductor relays. ISO/TS16949 is a standard based on ISO9001 that adds items necessary for the automobile industry. It calls for a comprehensive quality management system that includes CS, cost performance, ongoing improvement, and many other aspects of quality management.

■ Certification Status

- Switching Device Division approved
- Panasonic Industrial Devices Obihiro Co., Ltd. approved
- Panasonic Industrial Devices Taiko Co., Ltd. approved
- Panasonic Manufacturing (Thailand) Co., Ltd. approved
- Panasonic Industrial Devices Mexicana S.A. de C.V. approved
- Panasonic Electric Works Taiko Device (Shenzhen) Co., Ltd. approved

The Necessity and Pursuit of ISO Certification

-
- Expanding to other overseas bases
 - Expanding to affiliated companies and cooperating companies
 - ISO9000 Certification Acquisition
 - Switching Device Division certified for ISO9001 UKAS and RVA registration (October, 1993)
 - Panasonic Industrial Devices Obihiro Co., Ltd. certified for ISO9001
 - Panasonic Electric Works Europe AG certified for ISO9001
 - Panasonic Electric Works Europe AG, German Factory certified for ISO9001
 - Panasonic Industrial Devices (Beijing) Co., Ltd. certified for ISO9001
 - Panasonic Manufacturing (Thailand) Co., Ltd. certified for ISO9001
 - Panasonic Electric Works, Mexicana S.A. de C.V. certified for ISO9001
 - Instructional activities relating to ISO
 - Preparation of quality manuals and quality planning manuals
 - Establishment of new quality systems and expanding them to business operations
 - Upgrading internal quality monitoring

Advantages

- Strengthening and upgrading quality assurance organizational structures applicable on an international basis
- Technology can be accumulated and disseminated through documentation and records
- Leads to improved reliability of the manufacturer's quality and improved CS (customer satisfaction)
