

Common mode filters

For ultra high-speed differential signal line (HDMI, DVI, DisplayPort, USB3.0, etc.) ACM-H series

ACM2012H-T05 type

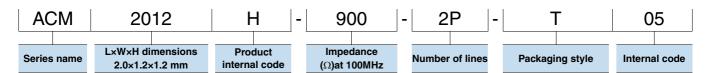

FEATURES

- O Broadband common mode filter that was developed for Gbps-level high-speed differential signal interfaces such as DVI and HDMITM.
- O Differential mode cutoff frequency is 6.0GHz, so they do not negatively influence high-speed differential signals.
- \bigcirc Characteristics impedance is matched for 100 Ω , which is set for many differential interfaces, and can suppress unnecessary reflection components.
- \bigcirc 380 $\!\Omega$ is a common mode filter developed for the LAN interface.
- OIt does not adversely affect the transmission signal of the LAN and suppresses unnecessary common mode noise.
- Operating temperature range: -40 to +85°C

APPLICATION

- EMI measure for HDMITM, which is an interface for digital video devices:ACM2012H is ideal for senders (Sources) such as Digital TVs, DVD recorders, and liquid crystal projectors, while ACM2012E(-T01 series) is ideal for receivers (Sink).
- O EMI measure for high-speed differential signal interfaces for digital video signal interfaces such as DVI, Display port, and Serial ATA used for PCs etc.
- \bigcirc The 380 Ω product is suitable for EMI-proofing with pulse-length ALT4532 series for devices connected to LANs such as personal computers
- \bigcirc Additionally, 90 Ω product is suitable for anti-EMI measures with pulse ALT4532H series in high-speed LAN interfaces such as 10G Ethernet.

■TEMPERATURE RANGE, INDIVIDUAL WEIGHT

Operating temperature range	Storage temperature range*	Individual weight
-40 to +85 °C	-40 to +85 °C	10 mg

^{*} The storage temperature range is for after the assembly.

REMINDERS FOR USING THESE PRODUCTS

Before using these products, be sure to request the delivery specifications.

SAFETY REMINDERS

Please pay sufficient attention to the warnings for safe designing when using this products.

⚠ REMINDERS	
 The storage period is less than 6 months. Be sure to follow the storage conditions (temperatural less). If the storage period elapses, the soldering of the terminal electrodes may deteriorate. 	re: 5 to 40°C, humidity: 10 to 75% RH or
 Do not use or store in locations where there are conditions such as gas corrosion (salt, acid, a 	ılkali etc.)
Before soldering, be sure to preheat components. The preheating temperature should be set so that the temperature difference between the sed does not exceed 150°C.	
 Soldering corrections after mounting should be within the range of the conditions determined i If overheated, a short circuit, performance deterioration, or lifespan shortening may occur. 	n the specifications.
When embedding a printed circuit board where a chip is mounted to a set, be sure that reside the overall distortion of the printed circuit board and partial distortion such as at screw tighteni	· ·
 Self heating (temperature increase) occurs when the power is turned ON, so the tolerance design. 	should be sufficient for the set thermal
 Carefully lay out the coil for the circuit board design of the non-magnetic shield type. A malfunction may occur due to magnetic interference. 	
Use a wrist band to discharge static electricity in your body through the grounding wire.	
On not expose the products to magnets or magnetic fields.	
On not use for a purpose outside of the contents regulated in the delivery specifications.	
The products listed on this catalog are intended for use in general electronic equipment (AV ment, home appliances, amusement equipment, computer equipment, personal equipment, ment, industrial robots) under a normal operation and use condition. The products are not designed or warranted to meet the requirements of the applications listed in trouviers a more stringent level of safety or reliability or whose failure, malfunction or trouble	office equipment, measurement equip-
