

## 86BSD

### Digital Output

#### SPECIFICATIONS

- ◆ **Stainless steel with O-ring seal**
- ◆ **Pressure/temperature read-out**
- ◆ **Digital output**
- ◆ **ASIC calibrated**
- ◆ **Absolute, gage**
- ◆ **Cable/connector option**
- ◆ **Low power option**
- ◆ **16mm diaphragm diameter**

The 86BSD is a small profile, media compatible, piezoresistive silicon pressure sensor packaged in a 316L stainless steel housing. This 14-bit digital output pressure sensor supports I2C and SPI interface protocols, may come in a 3.3 or 5.0Vdc supply voltage and is designed for o-ring mounting. The sensing package utilizes silicone oil to transfer pressure from the 316L stainless steel diaphragm to the sensing element.

The 86BSD is designed for high performance, low pressure applications. A custom ASIC is used for temperature compensation, offset correction, and provides a digital output of 10~90% or 5~95%.

For a similar sensor with stainless steel fittings, refer to the 85BSD digital output pressure sensor.

## FEATURES

- ◆ Mountable with O-ring seal
- ◆  $\pm 0.25\%$  Accuracy
- ◆  $\pm 1.0$  Total Error Band
- ◆ Cable/connector option
- ◆ Low power option
- ◆ I<sup>2</sup>C or SPI Interface protocols

## APPLICATIONS

- ◆ Level controls
- ◆ Tank level measurement
- ◆ Corrosive fluids and gas measurement systems
- ◆ Sealed systems
- ◆ Manifold pressure measurement
- ◆ Barometric pressure measurement
- ◆ Submersible depth monitoring

## STANDARD RANGES

Output Temperature Resolution	8		11	Bits	
Start Time to Data Ready			8.4	ms	9
Output Type	10% to 90% or 5% to 95%				
Interface Type	I <sup>2</sup> C (ADDR, 0x28H)				
	I <sup>2</sup> C (ADDR, 0X36H)				
	I <sup>2</sup> C (ADDR, 0x46H)				
	SPI				
Media – Pressure	Liquids and gases compatible with 316/316L Stainless Steel				

## Notes

- Measured at vacuum for absolute(A), ambient for gage(G) and sealed gage(S). Output is not ratiometric to supply voltage.
- Accuracy: combined linearity, hysteresis and repeatability.
- Total Error Band: includes calibration errors and temperature effects over the compensated range. See Figure 3.
- The deviation from a best fit straight line (BFSL) fitted to the output measured over the compensated temperature range. For errors beyond the compensated temperature range, See Figure 2.
- Between case and sensing element.
- 2X or 400psi, whichever is less. The maximum pressure that can be applied to a transducer without changing the transducer's performance or accuracy.
- 3X or 600psi, whichever is less. The maximum pressure that can be applied to a transducer without rupture of either the sensing element or transducer.
- Maximum temperature range for product with standard cable and connector is -20°C to +105°C.
- Start time to data ready is the time to get valid data after POR (Power on Reset). The time to get subsequent valid data is then specified by the response time specification.
