AIE Adaptive Image Enhancer Series
Real Time Video Processor ICs
BU1572GUW, BU1573KV, BU1574KU

No.09060EBT02

Pb Free
ROHM Electronic Components

RoHS
Directive Compliance

● Description

BU1572GUW/BU1573KV/BU1574KU is AIE : Adaptive Image Enhancer (image processing technology by ROHM's hardware). Camera video images are optimized for maximum visibility.

● Features

1) Compatible with image data from QCIF size (176 × 144) up to WVGA+ size (864 × 480)
2) Compatible with 80-system CPU bus interface and RGB interface.(BU1572GUW/BU1573KV)
3) Compatible with Input/Output data formats with RGB 5:6:5 and 6:6:6.(BU1572GUW/BU1573KV)
4) Multiple operation modes: Image Enhance, Analysis, Through and Sleep. *1
5) Two selectable register settings: indirect addressing through the 80-system CPU bus interface or the 2-wire serial interface (I^2C) *2
6) PWM output for image adjustment LCD backlight control.
7) Built-in edge-enhancement and gamma filters.
   *1: BU1574KU is an analysis mode setting interdiction.
   *2: BU1574KU becomes only the register set by the two-wire system serial interface.
   ∗ Extra document is prepared separately about each register setup. Please refer to the Development Scheme on page 10.

● Application

Portable media player, Mobile phone, car display, Car navigation system, and portable DVD etc.

● Lineup

Parameter	Supply power source voltage	Input Interface	Control Interface	Output Interface	PWM Output	Package
BU1572GUW	1.4-1.6(V_{DD}Core) 1.65-3.3(V_{DD}Io)	Supported up to Max WVGA+(864×480)	I^2C BUS (At RGB interface)	18bit RGB interface or bus interface	Image adjustment PWM output	VBGA063W050
BU1573KV	1.4-1.6(V_{DD}Core) 2.7-3.6(V_{DD}Io)	Supported up to Max WVGA+(864×480)	I^2C BUS (At RGB interface)	18bit RGB interface or bus interface	Image adjustment PWM output	VQFP64
BU1574KU	1.4-1.6(V_{DD}Core) 2.7-3.6(V_{DD}Io)	Supported up to Max WVGA+(864×480)	I^2C BUS	8bit YUV=4:2:2 parallel · CCIR601 · CCIR656	image adjustment PWM output	UQFP64

● Absolute maximum ratings (Ta=25℃)

Parameter	Symbol	Rating	Unit
Supply power source voltage 1	VDDIO	-0.3～+4.2	V
Supply power source voltage 2	VDD	-0.3～+2.1	V
Input voltage	VIN	-0.3～VDDIO+0.3	V
Storage temperature range	Tstg	-40～+125	℃
Power dissipation	PD	310 *1	mW

*In the case exceeding 25ºC, 3.1mW should be reduced at the rating 1ºC.
(BU1573KV: 7.5mW / BU1574KU: 7mW should be reduced at the rating.)
*1: BU1573KV is 750mW, and BU1574KU is 700mW.

● Recommended operating range

Parameter	Symbol	Rating	Unit
Supply power source voltage 1 (IO)	VDDIO	1.65～3.30(Typ:2.85V) *1	V
Supply power source voltage 2 (CORE)	VDD	1.40～1.60(Typ:1.50V)	V
Input voltage range	VIN-VDDIO	0～VDDIO	V
Operating temperature range	Topr	-20～+70 *2	℃

*Please supply power source in order of VDD→VDDIO.

*1 : BU1573KV and BU1574KU correspond to 2.70～3.60V(Typ:3.00V)
*2 : BU1573KV and BU1574KU correspond to −40～+85℃

●Electric characteristics

(Unless otherwise specified, VDD=1.50V,VDDIO=2.85V,GND=0.0V,Ta=25℃,f_{IN}=36.0MHz) *1

| Parameter	Symbol	Limits			Unit	Condition
		MIN.	TYP.	MAX.		
Input frequency	f_{IN}	-	-	36.0	MHz	DCKI (DUTY45%～55%) *2
Operating consumption current	IDD1	-	24	-	mA	At enhance mode setting (36MHz)
Static consumption current	IDDst	-	-	30	μA	At sleep mode setting, input terminal=GND setting
Input "H" current	IIH	-10	-	10	μA	VIH=VDDIO
Input "L" current	IIL	-10	-	10	μA	VIL=GND
Input "H" voltage 1	VIH1	VDDIO ×0.8	-	VDDIO +0.3	V	Normal input (including input mode of I/O terminal)
Input "L" voltage 1	VIL1	-0.3	-	VDDIO ×0.2	V	Normal input (including input mode of I/O terminal)
Input "H" voltage 2	VIH2	VDDIO ×0.85	-	VDDIO +0.3	V	Hysteresis input *3 (RESETB, DCKI, LCDCSBI/SDA, LCDWRBI/SDC, LCDRDBI/I2CDEV0)
Input "L" voltage 2	VIL2	-0.3	-	VDDIO ×0.15	V	Hysteresis input *4 (RESETB, DCKI, LCDCSBI/SDA, LCDWRBI/SDC, LCDRDBI/I2CDEV0)
Hysteresis voltage width	Vhys	-	0.7	-	V	Hysteresis input *5 (RESETB, DCKI, LCDCSBI/SDA, LCDWRBI/SDC, LCDRDBI/I2CDEV0)
Output "H" voltage	VOH	VDDIO -0.4	-	VDDIO	V	IOH=-1.0mA(DC) (including output mode of I/O terminal)
Output "L" voltage	VOL	0.0	-	0.4	V	IOL=1.0mA(DC) (including output mode of I/O terminal)

*1 : VDDIO=3.00V in case of BU1573KV / BU1574KU
*2 : CAMCKI in case of BU1574KU
*3,*4,*5 : It corresponds with RESETB CAMCKI SDA SDC I2CDEV0 for BU1574KU

●Equivalent Circuit Structures of input / output pins

Type	The equivalent circuit structure	Type	The equivalent circuit structure
A	Input pin	B	Input pin with the hysteresis function
C	Input pin with the suspend function	D	Input pin with the hysteresis and suspend functions
E	Output pin	F	In/output pin
G	In/output pin with the hysteresis function	H	In/output pin with the suspend function

●Terminal Layout

(BU1572GUW   Bottom View)   (BU1573KV/BU1574KU   Top View)
∗The terminal arrangement follows terminal function table of P.3-6.

● Timing Chart

1.   I2C interface
1.1   I2C interface timing
Table 1.1-1   I2C Interface timing

Symbol	Parameter	MIN.	TYP.	MAX.	Unit
f_{SCL}	SDC Clock Frequency	0	-	400	kHz
$t_{HD;STA}$	Hold-time(repetition) 『START』 conditions (The first clock pulse is generated after this period.)	0.6	-	-	us
f_{LOW}	The "L" period of SDC clock	1.3	-	-	us
t_{HIGH}	The "H" period of SDC clock	0.6	-	-	us
$t_{SU;STA}$	Setup time of repetitive 『START』 conditions	0.6	-	-	us
$t_{HD;DAT}$	Hold time of SDA	0	-		us
$t_{SU;DAT}$	Setup time of SDA	100	-	-	ns
$t_{SU;STO}$	Setup time of the 『STOP』 conditions	0.6	-	-	us
t_{BUF}	Bus free time between 『STOP』conditions and the 『START』conditions	1.3	-	-	us

2.   RGB interface

2.1.   RGB interface timing

The input timing of image signal on RGB I/F is shown in Table 2.1-1.
Table 2.1-1   BU1572GUW/BU1573KV   RGB interface input timing

Symbol	Explanation	MIN.	TYP.	MAX	UN
t_{DS}	Camera setup period (between the DCKI rising and falling edges)	8	-	-	ns
t_{DH}	Camera holding period (between the DCKI rising and falling edges)	8	-	–	ns

The output timing of image signal on RGB I/F is shown in Table 2.1-2.
Table 2.1-2   BU1572GUW/BU1573KV Image signal output timing

Symbol	Explanation	MIN.	TYP.	MAX.	UNIT
t_{DCLK}	Clock Cycle	27.7	-	-	ns
d_{DCLK}	Clock Duty	40	50	60	%
t_{ODD}	Decision of LCDDO from DCKO	-	-	5	ns
t_{OCD}	Decision of LCDVSO or LCDHSO from DCKO	-	-	5	ns

3.   YUV interface

3.1.   YUV interface timing

The input timing of image signal on YUV I/F is shown in Table 3.1-1.

Table 3.1-1   BU1574KU   YUV interface input timing

Symbol	Explanation	MIN.	TYP	MAX	UNI
t_{DS}	Camera setup period (between the CAMCKI rising and falling edges)	8	-	-	ns
t_{DH}	Camera holding period (between the CAMCKI rising and falling edges)	8	-	–	ns

The output timing of image signal on YUV I/F is shown in Table 3.1-2.

Table 3.1-2   BU1574KU Image signal output timing

Symbol	Explanation	MIN.	TYP.	MAX.	UNIT
t_{PCLK}	Clock Cycle	27.7	-	-	ns
d_{PCLK}	Clock Duty	40	50	60	%
t_{ODD}	Decision of CAMDO from CAMCKO	-	-	5	ns
t_{OCD}	Decision of CAMVSO or CAMHSO from CAMCKO	-	-	5	ns

●**Development Scheme**

This technical note is aimed at trying the connectivity in the hardware between customer's system and our AIE Adaptive Image Enhancer series.
We prepare various data and tools for every development STEP as follows other than this technical note, please contact the sales staff in your duty also including the support system.

(1) Demonstration STEP
(You can try the standard image processing functions by the standard Demonstration kit at once.)
You can confirm on TV screen what carried out AIE processing of a camera image and the DVD video image.
・Standard Demonstration board kit
◎Demonstration board(TV-IN→BU1573KV→TV-OUT board)
◎Demonstration board operation manual
◎Demonstration software
If the software for the trial board is installed in your Windows PC(Windows 2000/XP), more detailed setting is possible.
◎USB cable

(2) Confirmation STEP
(We will respond to customer's camera module.)
・Specifications
We will provide specifications for AIE Adaptive Image Enhancer according to customer's requirements.
・Function explanation
We will deliver you the function explanation describing detailed functions, register settings, external interfaces, timing, and so forth of AIE Adaptive Image Enhancer according to your requests.
・Application note
We will deliver you the detailed explanation data on application development of AIE Adaptive Image Enhancer according to your requests.

(3) System check STEP
(You can check the application operation as a system by the kit of system check tools and your camera module.)
You can check the interface with your camera module and the application operation on the system check board using the tools for user's only.
・System check tools kit
◎Board for system evaluation
◎Manual for system evaluation
◎Macro command file for reference
*You can check the detailed functions of the application operation by your PC using the macro command file.

(4) Integrated check STEP with user's system
(You can check the application operation as a system on your system check board using the integrated check software.)
You can check the application operation on the sample LSI-equipped system check board by your camera module using the integrated check software.
・On line Support ; We will answer your questions about the software development.

●**Cautions on use**
(1) Absolute Maximum Ratings
An excess in the absolute maximum ratings, such as supply voltage, temperature range of operating conditions, etc., can break down devices, thus making impossible to identify breaking mode such as a short circuit or an open circuit. If any special mode exceeding the absolute maximum ratings is assumed, consideration should be given to take physical safety measures including the use of fuses, etc.

(2) Operating conditions
These conditions represent a range within which characteristics can be provided approximately as expected. The electrical characteristics are guaranteed under the conditions of each parameter.

(3) Reverse connection of power supply connector
The reverse connection of power supply connector can break down ICs. Take protective measures against the breakdown due to the reverse connection, such as mounting an external diode between the power supply and the IC's power supply terminal.

(4) Power supply line
Design PCB pattern to provide low impedance for the wiring between the power supply and the GND lines.
In this regard, for the digital block power supply and the analog block power supply, even though these power supplies has the same level of potential, separate the power supply pattern for the digital block from that for the analog block, thus suppressing the diffraction of digital noises to the analog block power supply resulting from impedance common to the wiring patterns. For the GND line, give consideration to design the patterns in a similar manner.
Furthermore, for all power supply terminals to ICs, mount a capacitor between the power supply and the GND terminal. At the same time, in order to use an electrolytic capacitor, thoroughly check to be sure the characteristics of the capacitor to be used present no problem including the occurrence of capacity dropout at a low temperature, thus determining the constant.

(5)GND voltage

Make setting of the potential of the GND terminal so that it will be maintained at the minimum in any operating state. Furthermore, check to be sure no terminals are at a potential lower than the GND voltage including an actual electric transient.

(6)Short circuit between terminals and erroneous mounting

In order to mount ICs on a set PCB, pay thorough attention to the direction and offset of the ICs. Erroneous mounting can break down the ICs. Furthermore, if a short circuit occurs due to foreign matters entering between terminals or between the terminal and the power supply or the GND terminal, the ICs can break down.

(7)Operation in strong electromagnetic field

Be noted that using ICs in the strong electromagnetic field can malfunction them.

(8)Inspection with set PCB

On the inspection with the set PCB, if a capacitor is connected to a low-impedance IC terminal, the IC can suffer stress. Therefore, be sure to discharge from the set PCB by each process. Furthermore, in order to mount or dismount the set PCB to/from the jig for the inspection process, be sure to turn OFF the power supply and then mount the set PCB to the jig. After the completion of the inspection, be sure to turn OFF the power supply and then dismount it from the jig. In addition, for protection against static electricity, establish a ground for the assembly process and pay thorough attention to the transportation and the storage of the set PCB.

(9)Input terminals

In terms of the construction of IC, parasitic elements are inevitably formed in relation to potential. The operation of the parasitic element can cause interference with circuit operation, thus resulting in a malfunction and then breakdown of the input terminal. Therefore, pay thorough attention not to handle the input terminals, such as to apply to the input terminals a voltage lower than the GND respectively, so that any parasitic element will operate. Furthermore, do not apply a voltage to the input terminals when no power supply voltage is applied to the IC. In addition, even if the power supply voltage is applied, apply to the input terminals a voltage lower than the power supply voltage or within the guaranteed value of electrical characteristics.
(10)Ground wiring pattern

If small-signal GND and large-current GND are provided, It will be recommended to separate the large-current GND pattern from the small-signal GND pattern and establish a single ground at the reference point of the set PCB so that resistance to the wiring pattern and voltage fluctuations due to a large current will cause no fluctuations in voltages of the small-signal GND. Pay attention not to cause fluctuations in the GND wiring pattern of external parts as well.
(11)External capacitor

In order to use a ceramic capacitor as the external capacitor, determine the constant with consideration given to a degradation in the nominal capacitance due to DC bias and changes in the capacitance due to temperature, etc.

Notice

Precaution on using ROHM Products

1. Our Products are designed and manufactured for application in ordinary electronic equipments (such as AV equipment, OA equipment, telecommunication equipment, home electronic appliances, amusement equipment, etc.). If you intend to use our Products in devices requiring extremely high reliability (such as medical equipment [(Note 1)], transport equipment, traffic equipment, aircraft/spacecraft, nuclear power controllers, fuel controllers, car equipment including car accessories, safety devices, etc.) and whose malfunction or failure may cause loss of human life, bodily injury or serious damage to property ("Specific Applications"), please consult with the ROHM sales representative in advance. Unless otherwise agreed in writing by ROHM in advance, ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of any ROHM's Products for Specific Applications.

(Note1) Medical Equipment Classification of the Specific Applications

JAPAN	USA	EU	CHINA
CLASSⅢ	CLASSⅢ	CLASSⅡb	CLASSⅢ
CLASSⅣ		CLASSⅢ	

2. ROHM designs and manufactures its Products subject to strict quality control system. However, semiconductor products can fail or malfunction at a certain rate. Please be sure to implement, at your own responsibilities, adequate safety measures including but not limited to fail-safe design against the physical injury, damage to any property, which a failure or malfunction of our Products may cause. The following are examples of safety measures:
    [a] Installation of protection circuits or other protective devices to improve system safety
    [b] Installation of redundant circuits to reduce the impact of single or multiple circuit failure

3. Our Products are designed and manufactured for use under standard conditions and not under any special or extraordinary environments or conditions, as exemplified below. Accordingly, ROHM shall not be in any way responsible or liable for any damages, expenses or losses arising from the use of any ROHM's Products under any special or extraordinary environments or conditions. If you intend to use our Products under any special or extraordinary environments or conditions (as exemplified below), your independent verification and confirmation of product performance, reliability, etc, prior to use, must be necessary:
    [a] Use of our Products in any types of liquid, including water, oils, chemicals, and organic solvents
    [b] Use of our Products outdoors or in places where the Products are exposed to direct sunlight or dust
    [c] Use of our Products in places where the Products are exposed to sea wind or corrosive gases, including Cl_2, H_2S, NH_3, SO_2, and NO_2
    [d] Use of our Products in places where the Products are exposed to static electricity or electromagnetic waves
    [e] Use of our Products in proximity to heat-producing components, plastic cords, or other flammable items
    [f] Sealing or coating our Products with resin or other coating materials
    [g] Use of our Products without cleaning residue of flux (even if you use no-clean type fluxes, cleaning residue of flux is recommended); or Washing our Products by using water or water-soluble cleaning agents for cleaning residue after soldering
    [h] Use of the Products in places subject to dew condensation

4. The Products are not subject to radiation-proof design.

5. Please verify and confirm characteristics of the final or mounted products in using the Products.

6. In particular, if a transient load (a large amount of load applied in a short period of time, such as pulse. is applied, confirmation of performance characteristics after on-board mounting is strongly recommended. Avoid applying power exceeding normal rated power; exceeding the power rating under steady-state loading condition may negatively affect product performance and reliability.

7. De-rate Power Dissipation (Pd) depending on Ambient temperature (Ta). When used in sealed area, confirm the actual ambient temperature.

8. Confirm that operation temperature is within the specified range described in the product specification.

9. ROHM shall not be in any way responsible or liable for failure induced under deviant condition from what is defined in this document.

Precaution for Mounting / Circuit board design

1. When a highly active halogenous (chlorine, bromine, etc.) flux is used, the residue of flux may negatively affect product performance and reliability.

2. In principle, the reflow soldering method must be used; if flow soldering method is preferred, please consult with the ROHM representative in advance.

For details, please refer to ROHM Mounting specification

Precautions Regarding Application Examples and External Circuits

1. If change is made to the constant of an external circuit, please allow a sufficient margin considering variations of the characteristics of the Products and external components, including transient characteristics, as well as static characteristics.

2. You agree that application notes, reference designs, and associated data and information contained in this document are presented only as guidance for Products use. Therefore, in case you use such information, you are solely responsible for it and you must exercise your own independent verification and judgment in the use of such information contained in this document.   ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of such information.

Precaution for Electrostatic

This Product is electrostatic sensitive product, which may be damaged due to electrostatic discharge. Please take proper caution in your manufacturing process and storage so that voltage exceeding the Products maximum rating will not be applied to Products. Please take special care under dry condition (e.g. Grounding of human body / equipment / solder iron, isolation from charged objects, setting of Ionizer, friction prevention and temperature / humidity control).

Precaution for Storage / Transportation

1. Product performance and soldered connections may deteriorate if the Products are stored in the places where:
    [a] the Products are exposed to sea winds or corrosive gases, including Cl2, H2S, NH3, SO2, and NO2
    [b] the temperature or humidity exceeds those recommended by ROHM
    [c] the Products are exposed to direct sunshine or condensation
    [d] the Products are exposed to high Electrostatic

2. Even under ROHM recommended storage condition, solderability of products out of recommended storage time period may be degraded. It is strongly recommended to confirm solderability before using Products of which storage time is exceeding the recommended storage time period.

3. Store / transport cartons in the correct direction, which is indicated on a carton with a symbol. Otherwise bent leads may occur due to excessive stress applied when dropping of a carton.

4. Use Products within the specified time after opening a humidity barrier bag. Baking is required before using Products of which storage time is exceeding the recommended storage time period.

Precaution for Product Label

QR code printed on ROHM Products label is for ROHM's internal use only.

Precaution for Disposition

When disposing Products please dispose them properly using an authorized industry waste company.

Precaution for Foreign Exchange and Foreign Trade act

Since our Products might fall under controlled goods prescribed by the applicable foreign exchange and foreign trade act, please consult with ROHM representative in case of export.

Precaution Regarding Intellectual Property Rights

1. All information and data including but not limited to application example contained in this document is for reference only. ROHM does not warrant that foregoing information or data will not infringe any intellectual property rights or any other rights of any third party regarding such information or data. ROHM shall not be in any way responsible or liable for infringement of any intellectual property rights or other damages arising from use of such information or data.:

2. No license, expressly or implied, is granted hereby under any intellectual property rights or other rights of ROHM or any third parties with respect to the information contained in this document.

Other Precaution

1. This document may not be reprinted or reproduced, in whole or in part, without prior written consent of ROHM.

2. The Products may not be disassembled, converted, modified, reproduced or otherwise changed without prior written consent of ROHM.

3. In no event shall you use in any way whatsoever the Products and the related technical information contained in the Products or this document for any military purposes, including but not limited to, the development of mass-destruction weapons.

4. The proper names of companies or products described in this document are trademarks or registered trademarks of ROHM, its affiliated companies or third parties.

General Precaution

1. Before you use our Pro ducts, you are requested to care fully read this document and fully understand its contents. ROHM shall n ot be in an y way responsible or liabl e for fa ilure, malfunction or acci dent arising from the use of a ny ROHM's Products against warning, caution or note contained in this document.

2. All information contained in this docume nt is current as of the issuing date and subj ect to change without any prior notice. Before purchasing or using ROHM's Products, please confirm the la test information with a ROHM sale s representative.

3. The information contained in this doc ument is provi ded on an "as is" basis and ROHM does not warrant that all information contained in this document is accurate an d/or error-free. ROHM shall not be in an y way responsible or liable for an y damages, expenses or losses incurred b y you or third parties resulting from inaccur acy or errors of or concerning such information.
