4. Optimal length on the handle neck. Fingers are always correctly positioned for quick turning and precision control.
5. Three-component handle. Combines strong core with good grip.
6. Only rounded shapes. No pressure points no matter how you hold or use the screwdriver.
7. Soft, high-friction material with ridged surface for comfortable grip and maximum friction even when the hand is oily.
8. Flat face so the screwdriver won't roll.
9. Can be hung.
10. Large, rounded end lets you apply force without hurting the palm of your hand.

This is a really good screwdriver. Easier to use, more comfortable to hold and significantly more functional.

It reduces muscle tension and risk of accidents and injuries. And increases job satisfaction, productivity and profitability.

It hardly revolutionizes the way you work. But it can make your most valuable tool – your hand – last your whole life long.

More than aesthetically pleasing....
