

N-channel enhancement mode TrenchMOS™ transistor

BSP100

FEATURES

- 'Trench' technology
- Low on-state resistance
- Fast switching
- High thermal cycling performance
- Low thermal resistance

SYMBOL**QUICK REFERENCE DATA**

$$V_{DSS} = 30 \text{ V}$$

$$I_D = 6 \text{ A}$$

$$R_{DS(ON)} \leq 100 \text{ m}\Omega \text{ } (V_{GS} = 10 \text{ V})$$

$$R_{DS(ON)} \leq 200 \text{ m}\Omega \text{ } (V_{GS} = 4.5 \text{ V})$$

GENERAL DESCRIPTION

N-channel enhancement mode field-effect transistor in a plastic envelope using 'trench' technology.

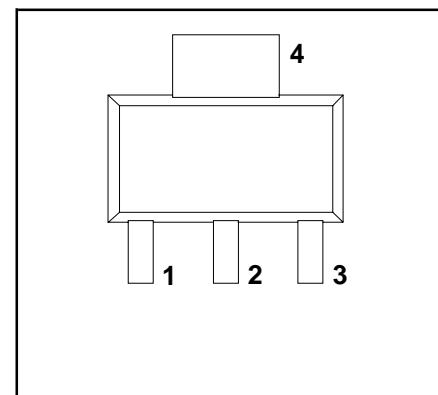

Applications:-

- Motor and relay drivers
- d.c. to d.c. converters
- Logic level translator

The BSP100 is supplied in the SOT223 surface mounting package.

Notes

- This product is supplied in anti-static packaging. The gate-source input must be protected against static discharge during transport or handling.
- Refer to Discrete Semiconductor Packages, Data Handbook SC18.
- Epoxy meets UL94 V0 at 1/8".

Data sheet status	
Objective specification	This data sheet contains target or goal specifications for product development.
Preliminary specification	This data sheet contains preliminary data; supplementary data may be published later.
Product specification	This data sheet contains final product specifications.
Limiting values	
Limiting values are given in accordance with the Absolute Maximum Rating System (IEC 134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of this specification is not implied. Exposure to limiting values for extended periods may affect device reliability.	
Application information	
Where application information is given, it is advisory and does not form part of the specification.
