2-Megapixel SOC Camera for the High-Volume Handset Market

The OV2659 addresses the increasing demand for 2-megapixel resolution cameras in the high-volume feature phones market. A high-performance system on a chip (SOC) sensor, the OV2659 delivers high-definition (HD) video and excellent low-light sensitivity for cost-sensitive applications. Based on OmniVision's 1.75-micron OmniPixel3-HS™ architecture, it achieves low-light sensitivity of 960 mV/lux-sec in a 1/5-inch optical format and ultra low profile (4 mm) that fits in an industry-standard 6.5 x 6.5 mm camera module.

The OV2659 offers advanced image signal processing delivering the quality and functionality of most high-performance DSC cameras. It includes support for 720p native HD video recording at 30 frames per second, excellent sensitivity and high quality image capture while meeting the cost, size and performance requirements of the high-volume camera phone market.

The OV2659 offers automatic image control functions, which include automatic exposure control, automatic white balance and automatic black level calibration. It also features all standard image quality controls such as color saturation, hue, gamma, sharpness (edge enhancement), lens correction, defective pixel canceling and noise canceling.

The OV2659 comes with a standard serial SCCB interface and digital video port (DVP) parallel output interface, offering support for UXGA, SVGA and 720p with programmable controls for frame rate as well as video operations.
