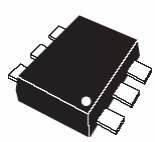
STLQ015xx

150 mA, ultra-low quiescent current linear voltage regulator

Datasheet – production data

Features

- Input voltage from 1.5 to 5.5 V
- Very low quiescent current:
  - 1.0 µA (typ) at no load
  - 1.4 µA (typ) at 150 mA load
  - 1 nA (typ) in OFF mode
  - 200 nA max in OFF mode at 125 °C
- Output voltage tolerance: ± 2% at 25 °C
- 150 mA guaranteed output current
- Wide range of output voltages: 0.8 V to 3.3 V in 100 mV steps
- Logic-controlled electronic shutdown
- Compatible with ceramic capacitor (C_{OUT} = 1 µF)
- Internal current and thermal limit
- Package: SOT666-6L
- Temperature range: -40 °C to 125 °C



SOT666

Description

The STLQ015xx provides 150 mA of maximum current from an input voltage ranging from 1.5 V to 5.5 V, with a typical dropout voltage of 112 mV. The key feature of this device is its quiescent current, which is just 1.4 µA at maximum output current. The device is stable with a ceramic capacitor on the output. It offers very low quiescent current, extending battery life and making the device suitable for applications requiring very long standby time. The enable logic control function puts the STLQ015xx in shutdown mode, reducing total current consumption to 1 nA. The device also includes short-circuit constant-current limiting and thermal protection. Typical applications for the device are portable and battery-powered systems, electronic sensors, and microcontroller power supply.

1. Dropout voltage is the input-to-output voltage difference at which the output voltage is 100 mV below its nominal value. This specification does not apply for output voltages below 1.5 V
2. During shutdown and at no load, P-channel leakage current flowing through the internal resistor divider determines the increase of V_{OUT}
3. Turn-on time is the time measured between the enable input just exceeding V_{EN} high value and the output voltage just reaching 95% of its nominal value
