Materials Definitions & Benefits

Each resin has properties that make it ideal for a specific purpose. We manufacture our plastic products using the grade most suited to the product's end use. Listed below are the quality resins we use and their attributes. Akro-Mils reserves the right to change product materials without notice.

■ **Polypropylene**
Rigid and very strong. High impact resistance. Hard surface resists scratches. Withstands temperatures between -20 and 150°F.

■ **Co-Polymer Polypropylene**
Unique additives increase strength, rigidity, and impact resistance.

■ **High Density Polyethylene**
Extremely rigid and very strong. Highly impact and chemical resistant. Extremely hard surface is resistant to scratches. Withstands temperatures between -20 and 150° F.

■ **Co-Polymer Polyethylene**
Unique additives increase impact resistance over standard high-density polyethylene.

■ **Polystyrene**
More flexible to withstand impacts. Withstands temperatures between -30 and 115° F.

■ **High-Impact Polystyrene**
A part of the Styrene family, but superior in UV, impact, and weather resistance. High-gloss surface. Withstands temperatures up to 180°F.

■ **Structural Foam/Web**
Advanced molding process makes an extremely durable product that will withstand heavy loads and high levels of abuse. Withstands temperatures between -30 and 120° F.

■ **FDA Approved Materials**
Resins and colorants are FDA-approved for use in the food industry.

■ **ESD Materials**
Provides the highest degree of electrostatic discharge protection available with consistent uniform surface resistivities in the static dissapative range of 10^6-10^9 ohms/sq.

Casters & Wheels

A generous selection of caster and wheel options allows Platform Trucks, Hand Trucks, Dollies, and Shelf Carts to be customized to fit hundreds of applications, surfaces, and conditions. Caster and wheel choices allow you to resolve problems of noise control, floor protection, impact and abrasion resistance, or load capacity.

Caster Types

Phenolic
Economical, high-capacity wheel rolls easily and is resistant to chemicals and oils.

Polyurethane
A heavy-duty wheel with polyurethane cushion tread bonded to a cast iron core. Resists most chemicals and oils.

Moldon Rubber
A quiet, shock-absorbing wheel with rubber cushion tread bonded to a cast iron core.

Non-Marking
Soft rubber cushion tread on polished aluminum hub provides maximum floor protection and shock resistance.

Hi-Tech Performa Wheels
Hi-Tech Performa wheels in flat or round tread designs, resist damage from weather, water, steam, or metal shavings. Thermoplastic elastomer treads are load-rated up to 500 lbs. per wheel.

Steel
Extremely durable, high-capacity cast iron wheel rolls easily under heavy loads and is highly resistant to abrasion.

Polyolefin
A heavy-duty, light-weight, non-marking plastic wheel that resists most chemicals and oils, and has excellent impact resistance.

Semi-Pneumatic
Co-polymer polypropylene wheel on an aluminum hub. Specifically designed for material handling equipment.

Full Pneumatic
Air-filled for excellent shock protection, floor protection, and easy operation over rough surfaces.

Pro-Tech Wheels
The Pro-Tech polyurethane wheel is a non-marking, cushion ride design that can be ordered with non-metallic, delrin bearings that are unaffected by water, steam, oil, and most acids. Pro-Tech wheels are load-rated up to 750 lbs.
