MINIATURE TUBULAR TERMINALS

• Quick and Easy to Install • For Production or Prototype
• Postive Locking In-Hole • No Staking Required • Holds .010 (.25) to .050 (1.27) Diameter Wire

These terminals are often used for transistor and Bi-Pin lamp sockets. Terminals snap into place and are firmly held without the need of staking. Wire leads can be inserted from either end.

Terminals 1236 and 1237 have tapered socket spring forming that will hold multiple leads in place. Terminals are pre-tinned for easy soldering.

"FLEA" CLIP

For subminiature applications where conventional terminals are too large or too costly. Ideal for quick repairs of printed circuitry. Simply insert wire through hole and it is held firmly by spring action assuring continued postive contact.

.025 SQUARE WIRE WRAP PINS

Completely burr free straight to within .003 (.08) per inch. Conical ends of square-wire with smooth blend-in radius on corners assures ease of insertion with minimum damage to pre-plated PCB holes.
