

Power supply CP-E 24/2.5

Primary switch mode power supply

Data sheet

- ① OUTPUT L+, L-: terminals - output
- ② DC OK: terminal - signalling output
- ③ INPUT L, N, PE: terminals - input
- ④ OUTPUT OK: green LED - output voltage OK
- ⑤ OUTPUT Adjust: potentiometer - adjustment of output voltage
- ⑥ Circuit diagram

Features

- Rated output voltage 24 V DC
- Output voltage adjustable via front-face rotary potentiometer "OUTPUT Adjust"
- Rated output current 2.5 A
- Rated output power 60 W
- Wide range input 100-240 V AC (85-264 V AC, 90-375 V DC)
- Typical efficiency of 89 %
- Low power dissipation and low heating
- Free convection cooling (no forced cooling with ventilators)
- Ambient temperature range during operation -40...+70 °C
- Open-circuit, overload and short-circuit stable
- Integrated input fuse
- Redundancy unit CP-RUD offering true redundancy, available as accessory
- Signalling output "DC OK" (Transistor) for output voltage OK
- LEDs for status indication

Approvals

- UL 508, CAN/CSA C22.2 No.14 Approval refers to rated input voltage U_{in}
- UL 1310, CAN/CSA C22.2 No.223 (Class 2 Power Supply)
- ANSI/ISA-12.12 (Class I, Div. 2, hazardous locations)
- UL 60950, CAN/CSA C22.2 No.60950 Approval refers to rated input voltage U_{in}
- GOST
- CCC Approval refers to rated input voltage U_{in}

Marks

- CE CE
- C-Tick C-Tick

Order data

Type	Input voltage range	Rated output voltage / current	Order code
CP-E 24/2.5	85-264 V AC / 90-375 V DC	24 V DC / 2.5 A	1SVR 427 032 R0000

Order data - Accessories

Type	Description	Order code
CP-RUD	Redundancy unit The CP-RUD provides decoupling of two CP-E power supply units ≤ 35 V and < 5 A.	1SVR 423 418 R9000

Application

The primary switch mode power supply offers two voltage input ranges. This enables the supply with AC or DC. Furthermore it is equipped with two generous capacitors, which ensure mains buffering of at least 30 ms (at 230 V AC). That is why the devices can be used worldwide also in high fluctuating networks and battery-powered plants.

Power supply CP-E 24/2.5

Primary switch mode power supply

Data sheet

Operating mode

By means of the potentiometer „OUTPUT Adjust“ the output voltage can be adjusted within a range of 24 to 28 V DC. Thus, the power supply can be optimally adapted to the application, e.g. compensating the voltage drop caused by a long line length.

The green LED „OUTPUT OK“ is lightening during operation.

Installation

Mounting

The switch mode power supply can be snapped on a DIN rail according to IEC/EN 60715 as shown in the accompanying picture. For that the device is set with its mounting rail slide on the upper edge of the mounting rail and locked by lifting it downwards.

Demounting

Remove the switch mode power supply as shown in the accompanying picture. For that the latching lever is pulled downwards by means of the screwdriver. Alternatively you can press the unlock button to release the device. Then in both cases the device can be unhinged from the mounting rail edge and removed.

Mounting position

The devices have to be mounted horizontally with the input terminals on the bottom. In order to ensure a sufficient convection, the minimum distance to other modules should not be less than 25 mm in vertical and horizontal direction.

Electrical connection

Connect the input terminals L and N. The protective earth conductor PE must be connected. The installation must be executed acc. to EN 60950, provide a suitable disconnecting device (e. g. line protection switch) in the supply line. The input side is protected by an internal input fuse.

Rate the lines for the maximum output current (considering the short-circuit current) or provide a separate fuse protection. We recommend to choose the cable section as large as possible in order to minimize voltage drops. Observe the polarity. The device is overload, short-circuit and open-circuit proof. The secondary side of the power supply unit is electrically isolated from the input and internally not earthed (SELV) and can therefore be earthed by the user according to the needs with L+ or L- (PELV).

Connection diagram

Wiring instructions

Safety instructions and warnings

The device must be installed by qualified persons only and in accordance with the specific national regulations (e.g., VDE, etc.). The devices are maintenance-free chassis-mounted units.

Disconnect system from supply network!

Before any installation, maintenance or modification work: Disconnect the system from the supply network and protect against switching on.

Before start of operation:

Attention! Improper installation/operation may impair safety and cause operational difficulties or destruction of the unit. Before operation the following must be ensured:

- Connect to main according to the specific national regulations.
- Power supply cables and unit must be sufficiently fused. A disconnecting device has to be provided for the power supply to disengage unit and supply cables from supply mains if required.
- The protective earth conductor must be connected to the terminal PE (Protection class I)
- The secondary side of the power supply unit is not earthed and can be earthed by the user according to the needs with L+ or L-.
- Rate the output lines for the output current of the power supply and connect them with the correct polarity.
- In order to ensure sufficient air-cooling the distance to other devices has to be considered.

In operation:

- Do not modify the installation (primary and secondary side)! High current! Risk of electric arcs and electric shocks (danger to life)!
- Risk of burns: Depending on the operation conditions the enclosure can become very hot.
- The internal fuse is not user-replaceable. If the internal fuse blows, most probably the device is defective. In this case, an examination of the switch mode power supply by the manufacturer is necessary.

Attention! High voltage! Danger to life!

The power supplies contain components with high stored energy and circuits with high voltage! Do not introduce any objects into the unit, and do not open the unit. With some units of this range the output is capable of providing hazardous energy. Ensure that the service personnel is protected against inadvertent contact with parts carrying energy.

Data sheet

Technical data

Data at $T_a = 25\text{ °C}$, $U_{in} = 230\text{ V AC}$ and rated values, unless otherwise indicated

Type		CP-E 24/2.5
Input circuit		L, N
Rated input voltage U_{in}		100-240 V AC
Input voltage range		85-264 V AC / 90-375 V DC
Frequency range AC		47-63 Hz
Typical current consumption	at 115 V AC	1060 mA
	at 230 V AC	590 mA
Typical power consumption		69.2 W
Inrush current limiting	at 115 V AC	20 A (max. 3 ms)
	at 230 V AC	40 A (max. 3 ms)
Discharge current	input / output	0.25 mA
	input / PE	3.5 mA
Power failure buffering time	at 115 V AC	min. 20 ms
	at 230 V AC	min. 30 ms
Internal input fuse		2 A slow-acting / 250 V AC
Power factor correction (PFC)		no
Indication of operational states		
Output voltage	OUTPUT OK: green LED	 : output voltage OK
Output circuit		L+, L+, L-, L-
Rated output voltage		24 V DC
Tolerance of the output voltage		0 ... +1 %
Adjustment range of the output voltage		24-28 V DC
Rated output power		60 W
Rated output current I_r	$T_a \leq 60\text{ °C}$	2.5 A
Derating of the output current	$60\text{ °C} < T_a \leq 70\text{ °C}$	2.5 %/°C
Signalling output for output voltage OK	DC OK	Transistor
Maximum deviation with	load change statical	$\pm 0.5\%$
	change of output voltage within the input voltage range	$\pm 0.5\%$
Control time		< 2 ms
Starting time after applying the supply voltage	at I_r	max. 1 s
	with 7000 μF	max. 1.5 s
Rise time	at I_r	max. 150 ms
	with 7000 μF	max. 500 ms
Fall time		max. 150 ms
Residual ripple and switching peaks	BW = 20 MHz	50 mV
Parallel connection		yes, to enable redundancy
Series connection		yes, to increase voltage
Resistance to reverse feed		1 s - max. 35 V DC
Output circuit - No-load, overload and short-circuit behaviour		
Characteristic curve of output		U/I characteristic curve
Short-circuit protection		continuous short-circuit proof
Short-circuit behaviour		continuation with output power limiting
Overload protection		output power limiting
No-load protection		continuous no-load stability
Starting of capacitive loads		7000 μF

Technical diagrams

Characteristic curve of output at $T_a = 25\text{ °C}$

The switch mode power supply CP-E 24/2.5 is able to supply at 24 V DC output voltage and

- at an ambient temperature of:
 $\leq 60\text{ °C}$ a continuous output current of approx. 2.5 A
- at ambient temperatures of:
 $60\text{ °C} < T_a \leq 70\text{ °C}$ the output power has to be reduced by 2.5 % per °C temperature increase.

If the switch mode power supply is loaded with an output current > 2.5 A, the operating point is passing through the U/I characteristic curve shown.

Characteristic curve of temperature at rated load
