Universally configurable 4-way signal conditioner, with switching output and plug-in connection technology for the electrical isolation of analog signals. Configurable via DIP switch or software. Push-in connection technology, standard configuration.

Product description

Configurable, freely adjustable 3-way signal conditioner with switching output and plug-in connection technology for the electrical isolation, conversion, amplification, and filtering of standard and normalized signals. On the input side, current signals in the range 0 mA ... 24 mA and voltage signals in the range 0 V ... 12 V can be processed. On the output side signals between 0 mA ... 21 mA or 0 V ... 10.5 V are possible. The minimum measurement range is 1 mA or 0.5 V. Full accuracy is maintained with a measuring range greater than 10 mA or 5 V. You can configure the device via DIP switch or, with extended functionality, via the S port using the ANALOG-CONF standard software, via FDT/DTM or without additional accessories using the MINI Analog Pro smartphone app. The measuring transducer supports fault monitoring and NFC communication.
