If more information is needed concerning the products in this publication, or if you have any special application needs, please contact your nearest Amphenol sales office or Amphenol Corporation at the following address:

Amphenol Corporation
Amphenol Aerospace
40-60 Delaware Ave., Sidney, NY 13838-1395
Phone: 800-678-0141 or 607-563-5011
Fax: 607-563-5157

See this catalog and the majority of catalogs of Amphenol Aerospace and Amphenol Industrial interconnection products at **www.amphenol-aerospace.com**

Amphenol Aerospace is a Certified ISO9001 Manufacturer.

Amphenol® Cylindrical Connectors for Printed Circuit Board Applications

This catalog has been specifically designed to assist in the critical process of selecting the right cylindrical connector for a printed circuit board application.

Contact arrangements have been carefully selected to guide the designers to the most commonly available and widely used insert patterns. The pin-out location illustrations of these contact insert patterns are shown first, followed by connector shell style drawings in three series: MIL-DTL-38999, MIL-C-26482, and MIL-C-5015. The mechanical and electrical environments of the application typically determine the choice of the series.

The following key points give a quick overview of the three cylindrical connector series that are provided in this catalog. Catalogs can be requested from Amphenol, Sidney, NY for more detail on each of these series*.

MIL-DTL-38999 CONNECTORS

- Lightweight, compact, high density and high reliability cylindrical
- Operating voltage to 900 VAC (RMS) at sea level
- Environmentally resistant
- Solder or crimp rear release contacts in mating plug
- Series I (LJT) - Bayonet coupling
 - Scoop-proof (recessed pins) offers maximum contact protection
- Series II (JT) - Bayonet coupling
 - For applications requiring maximum weight/space savings and reliability
- Series III (Tri-Start) - Threaded, quick coupling in one complete turn
 - Designed for general duty as well as severe environmental applications
 - Superior EMI shielding with grounding fingers and metal-to-metal mating
 - Filter/Transient protection versions available
 - Scoop-proof contact protection
 - Stainless steel firewall versions, and composite versions

MIL-C-26482 CONNECTORS

- Medium size, widely used cylindrical
- Operating voltage to 1,000 VAC (RMS) at sea level
- Series 1 (PT) - Bayonet coupling - most commonly used in PCB applications
- Environmentally resistant
- Solder or crimp front and rear release contacts in mating plug
- Black/green zinc alloy plating (cadmium-free) available

MIL-C-5015 CONNECTORS

- Medium-heavy weight, time-tested cylindrical
- Operating voltage to 1,500 VAC (RMS) at sea level
- Environmentally resistant or general duty
- Threaded coupling
- Solder or crimp rear insertion contacts in mating plug
- Black/green zinc alloy plating (cadmium-free) available

There is a guide to selecting a cylindrical connector with printed circuit board contacts on the following page to assist you further.

Also provided in this catalog are several additional product options for the designer of PCB board applications. For example: Amphenol's flex assemblies provide solutions for attachment to PCB boards where a self-locking terminal pad is needed or in tight-fitting space requirements.

Connectors with compliant pin contacts are available, as well as other connector series which can incorporate PCB contacts.

See pages 38 and 39 for these additional cylindrical product offerings, and page 40 which gives information on Amphenol PCB rectangular connectors.

Request Catalog 12-020 for MIL-C-5015

Guide to Selecting a PCB Cylindrical Connector

The connector selection process is one of the most important engineering decisions to be made in any electronic application. Amphenol has created this catalog specifically to provide the necessary information to select, layout and design both the appropriate Amphenol® cylindrical connector with PCB contacts and the connector footprint (contact locations) on the printed circuit board. The guide that follows is for application of cylindrical connectors on rigid printed circuit boards and also applies if a flex print assembly is being used.

Engineers working on those PCB or flex print applications requiring rectangular connectors are encouraged to refer to page 40 and ask for Amphenol Rectangular Product catalogs.

How To Select A Cylindrical Connector for a PCB Application

The data provided in this catalog is based on three cylindrical connector series: MIL-DTL-38999 Series I, II and III, MIL-C-26482 Series 1, and MIL-C-5015. See page 1 for electrical and environmental features and differences of these three series. The “hot” side of the application determines the choice of pin or socket genders of the contacts.

How to Measure the PCB Tail Length

The tail length of the PCB is the portion of the contact that extends beyond the rear of the shell. This length will vary in relationship to the mounting flange, depending on the series of connector selected. Standard lengths are shown on the connector shell style drawings in this catalog. See pages 26-37. These pages also provide how to order part numbering for standard PCB cylindrical connectors.

When computing the desired tail length, it is important to take into consideration the following factors:

- The connector series and shell style.
- The mounting style of the receptacle; jam nut (D hole) or panel mount (four holes). This can affect the overall length of the tail.
- The extension of the tail beyond the opposite side of the board or the flex.
- The space required to adequately clean flux from between the board or flex and the rear of the connector shell. Connectors that are mounted flush against the board may trap soldering flux which could lead to corrosion of the solder joints.
- Any mechanical methods needed to stabilize the board or flex to the connector and/or the panel. The PCB tails shown in this catalog are of one diameter. Standoffs may be required for certain applications. Stepped tails or PCB tails with an increased diameter on a designated portion may be required for certain applications. Please call Amphenol to discuss any optional designs or any special requirements that are not covered in this catalog.

What Determines the Diameter of the PCB Tail?

The outside diameter of the PCB tail is determined by the inside diameter of the plated through-hole on the board or flex print. The standard or most popular diameters are shown in the following chart and are called out in the connector illustrations in this catalog (Pgs. 26-37).

Standard diameters of PCB tails

Connector Series	Size 16 Contact	Size 20 Contact	Size 22D Contact
MIL-DTL-38999	.062 ±.001	.019 ±.001	.019 ±.001
MIL-C-26482	.030 ±.001	.030 ±.001	Not available
MIL-C-5015	.030 ±.001	Not available	Not available

For availability of other contact diameters, consult Amphenol, Sidney NY.

Should PCB Tails be Gold Plated or Pre-tinned?

The standard PCB tails for MIL-DTL-38999 and MIL-C-26482 receptacles have gold plating, .00050 inches over nickel. PCB tails for MIL-C-5015 receptacles are plated with silver, .00010 inches over copper. Amphenol can substitute a pre-tinned version of these tails to facilitate the termination process. This pre-tinning is a 60/40 lead-tin alloy. Call Amphenol for further information on pre-tinning and any other plating of contacts not covered in this catalog.

Would Flex Assemblies be Necessary or Beneficial for the Application?

Flex print can radically simplify the assembly of a connector to a system, as well as eliminate wiring errors. Consult Amphenol for the choices of flex assemblies. (See page 38 for brief description).

Cylindrical Connectors with PCB contacts

insert availability

The following table lists the most commonly used insert arrangements for printed circuit board application of MIL-DTL-38999, MIL-C-26482 and MIL-C-5015 cylindrical connectors. This represents the most readily available patterns within these series. See illustrations of these selected patterns on the following pages. If you require other arrangements than what are shown here, consult Amphenol for further availability.

Cylindrical Connectors with PCB contacts

alternate positioning available for MIL-DTL-38999 connectors

To avoid cross-plugging problems in applications requiring the use of more than one connector of the same series, size and arrangement, alternate rotations are available as indicated in the accompanying charts.

In MIL-DTL-38999 Series I, II and III connectors the rotation is based on rotating the master key/keyway in the connector shell.

A plug with a given rotation letter will mate with a receptacle with the same rotation letter. Only the master key/keyway rotates in the shell, and the insert always remains in the same position relative to the minor keys. Refer to diagrams below for each connector series.

LJT (MIL-DTL-38999 Series I) KEY/KEYWAY ROTATION

AB ANGLE OF ROTATION (Degrees)					
Shell Size	Normal°	A°	B°	C°	D°

Cylindrical Connectors with PCB contacts

alternate positioning available for MIL-C-26482 and MIL-C-5015 connectors

To avoid cross-plugging problems in applications requiring the use of more than one connector of the same series, size and arrangement, alternate rotations are available as indicated in the accompanying charts.

In MIL-C-26482 and MIL-C-5015 connectors the rotation is based on rotation of the insert within the connector.

A plug with a given rotation letter will mate with a receptacle with the same rotation letter. The front face of the pin insert is rotated within the shell in a clockwise direction from the normal shell key. Refer to diagram below for both MIL-C-26482 and MIL-C-5015 connectors.

HOW TO ORDER

- Order by applicable 88/91 part number in table below.
88 prefix designates olive drab cadmium plated connector shell.
91 prefix designates electroless nickel plated connector shell.
- Add insert arrangement to end of number. Refer to insert availability chart on page 3 and pin-out illustrations on pages 3-23.
- Z dimension is determined by contact type in the insert arrangement.
- Most common options are shown; other options are available.

HOW TO ORDER

- Order by applicable 88/91 part number in table below.
88 prefix designates olive drab cadmium plated connector shell.
91 prefix designates electroless nickel plated connector shell.
- Add insert arrangement to end of number. Refer to insert availability chart on page 3 and pin-out illustrations on pages 3-23.
- Z dimension is determined by contact type in the insert arrangement.
- Most common options are shown; other options are available.

- Designates true position dimensioning
† Red band indicates fully mated
†† Blue band indicates rear release contact retention system

Cylindrical Connectors with PCB contacts

additional products

CONNECTOR FLEX ASSEMBLIES

Amphenol offers connector flex assemblies for attachment of cylindrical connectors to PCB boards. Features and benefits include:

- Available for MIL-DTL-38999 (including filter EMI/EMP types), MIL-C-5015 and MIL-C-26482 cylindrical connectors
- Sculptures® Flexible Circuits with built-in terminations
- Eliminate the failures associated with crimped or solder-on contacts
- Geometrically fit tight space requirements and create a self-locking terminal pad

VARIETY OF PCB CONTACTS

Amphenol can provide a vast array of different types of contacts for PCB board application.

- Coax
- Twinax
- Triax
- Sizes 8, 16, 20, 22

Also see catalog 12-130, Amphenol High Frequency Contacts for Multi-pin Connectors.

CONNECTORS WITH COMPLIANT PIN CONTACTS

Compliant pins engage the plated through-holes in the board without the need for soldering. This optional contact style offers the following benefits:

- Easy board repairability
- Improved board processing time
- Excellent temperature performance
- Ideal for low-lead applications

Also see Product Data sheet #188, Amphenol Press-Fit Connectors with Compliant Pins.

Cylindrical Connectors with PCB contacts

additional products

ALIGNMENT DISCS

Amphenol offers alignment discs for attachment of cylindrical connectors to PCB boards. Features and benefits include:

- Simplified installation of boards
- Protection during shipment
- Optimized electrical circuit separation

UNIVERSAL HEADER ASSEMBLIES FOR FLEX PRINT/PC BOARD MOUNTING

Amphenol header assemblies provide time and cost saving potentials. They can be vapor phase or wave soldered to flex or printed circuit boards prior to the receipt of an EMI/EMP connector. Headers can be installed to standard connectors, allowing for electrical testing that would adversely affect the sensitive diodes, MOV's or capacitors in the EMI/EMP connectors. Expensive connector assemblies can be easily removed from and reattached to the header assembly as the manufacturing process dictates.

Amphenol universal headers mount to all MIL-DTL-38999 and MIL-C-26482 connectors. For more information on Universal Headers see Amphenol Product Data sheet #169.

REVERSE BAYONET CONNECTORS WITH PCB CONTACTS

Printed circuit board contacts can be supplied on GT Series connectors which feature quick mating reverse bayonet coupling. Widely used in commercial, geophysical, aerospace, ground support and shipboard applications, the features and benefits of the GT Series include:

- Audible, tactile and visual full-mating indicators
- Waterproof to a depth of 33 ft.
- Inserts available in neoprene and Viton* or low smoke/zero halogen materials
- Mating plugs available with crimp or solder termination
- Gold or silver plated contacts
- Zinc alloy (cadmium-free) shell plating available
- Durability of 2000 couplings minimum

For more information on reverse bayonet GT Series connectors see Amphenol Catalog 12-024.

* Viton is a registered trademark of Dupont/Dow Company.

Amphenol® Rectangular Interconnects

additional products for PCB application

1

2

3

4

5

Amphenol is also a leader in rectangular interconnects for printed circuit board application. Within the rectangular families of Amphenol interconnects are Low Mating Force MIL-C-55302 connectors and LRM Surface Mount Connectors.

LOW MATING FORCE MIL-C-55302 CONNECTORS

- Superior electrical characteristics - redundant current paths, low constrictive resistance, stable time/life contact resistance, uniform current densities
- High performance polyester dielectric moldings
- Over 20,000 mating cycles with B³ Bristle Brush Bunch contacts®*
- Significant reduction in mating force. Only 1.5 ounce max contact engaging and separating forces
- -65° to +125°C temperature rating
- High circuit count interconnections to 400 contacts per connector
- Two, three and four row patterns, 10 to 100 contacts per row, in one contact per row increments
- 0.100 in. center to center contact spacing, square grid
- Serviceability - removable crimp contacts, repairable PC stud and solder less wrap contacts
- Board support structure - reinforcing reduced
- Variety of contact terminations and platings
- Accessories to suit latching, piloting and polarization variations
- Up to 256 keyed mating polarizations

M55302/166 or 167 Mother Board, M55302/170 Daughter Board

1., 2. Two piece PCB connector featuring PCB stud or solderless wrap contacts in the MB Series and field repairable 90° PCB stud contacts in the DB Series.

M55302/169 Input/Output

3. Rear release, rear removable crimp contacts for discrete wire cabling. I/O connector series mates with standard MB and PC receptacle series to provide external inputs/outputs.

M55302/168 PC

4. 90° PCB stud contacts for side mounting on board. Mates with DB and I/O series.

LRM SURFACE MOUNT CONNECTORS

5. The introduction of high speed integrated circuitry such as VHSIC and MMIC has enabled the Design Engineer to accomplish far more on his printed circuit board than ever before. This, coupled with the emergence of a revolutionary change in avionics packaging - modular avionic architectures - has created the need for a high performance, low insertion force PCB connector with significantly increased contact density.

Designed to meet the high density needs of today's integrated electronic modules, this Straddle Mount connector uses the Amphenol® Bristle Brush Contact and is offered in three design options:

- **GEN-X Grid** - 472 contacts LRM pattern in 8 rows
.075 inch spacing along the row with .060 inch between rows, offset .0375 inch (mating force)
- **Staggered Grid** - 360 contacts LRM pattern in 8 rows
.100 inch spacing along the row with .050 inch between rows, offset .050 inch (mating force)
- **Chevron Grid** - 300 contacts LRM pattern in 6 rows
.075 inch spacing along the row with .075 inch between rows, offset .025 inch (mating force)
